INTRODUCTION TO BINARY TRADING:

Binary trading, also known as binary options trading, is a type of financial trading where investors speculate on whether the price of an asset will go up or down within a predetermined time frame. It involves making short-term trades on a wide range of assets such as stocks, commodities, currencies, and indices.

Used in Binary Trading:

1. Call Option: A binary option where the trader predicts that the price of the underlying asset will rise before the expiration time.

2. Put Option: A binary option where the trader predicts that the price of the underlying asset will fall before the expiration time.

3. Expiration Time: The predetermined time at which a binary option contract expires. Traders must make their predictions before this time.

4. In-the-Money: When a binary option finishes with a profit for the trader. In a call option, it means the expiration price is higher than the strike price, and in a put option, it means the expiration price is lower than the strike price.

5. Out-of-the-Money: When a binary option finishes with a loss for the trader. In a call option, it means the expiration price is lower than the strike price, and in a put option, it means the expiration price is higher than the strike price.

6. Strike Price: The price at which a binary option is entered or executed. Traders predict whether the price of the underlying asset will be above or below this level at the expiration time.

7. Pay-out: The fixed amount of profit that a trader receives if their binary option expires in-the-money.

8. Broker: A company or platform that provides access to binary trading markets and executes trades on behalf of traders.

Binary Trading Process:

1. Select an asset: Choose the underlying asset you want to trade, such as stocks, commodities, currencies, or indices.

2. Determine the expiry time: Decide on the length of time until the binary option expires. It could be as short as a few minutes or as long as several days.

3. Choose the option type: Select either a call option if you believe the price will rise or a put option if you believe the price will fall.

4. Set the investment amount: Determine how much money you want to invest in the trade.

5. Make the prediction: Predict whether the price of the asset will be above or below the strike price at the expiration time.

6. Monitor the trade: Keep an eye on the trade during the predetermined time period.

7. Examine the results: Once the option expires, check whether it finished in-the-money or out-of-the-money.

8. Receive the pay-out: If the trade finishes in-the-money, collect the predetermined pay-out.

It's important to note that binary trading involves risks, and it's advisable to acquire sufficient knowledge, use risk management strategies, and consult with a professional advisor before engaging in binary options trading.
