

BINARY TRADING
BUG STRATEGY
95%-100% Accuracy

ABOUT US

I want to tell you about myself. I am a professional
trader and I have 5 years experience of Binary option trading and now I have made this book so that all of you can earn a good profit. I want to tell you that I have created this book so that you can succeed in binary options by reading it and by the knowledge and strategy given in it.In this book, I have told how you can make a good profit in the binary option trading by using only one strategy. In this book you will get 1 Bug strategy, you will have to use a single strategy every day. My strategy will have its own simple task.

We have built it in a lot of time and we have done a lot of testing, so that it will always give good results in binary options trading.

WHAT IS BUG STRATEGY?

The bug strategy means that it is a permanent strategy that will always give you good results. You can use it for a lifetime. This Strategy always works in the market.. You can earn a lot of profit in binary trading with only one strategy. It is also very easy to use, you can earn profit from their signal by just putting some indicators and oscillators.

ACCURACY:-

The accuracy of normal Indicator or oscillator is only 40% - 50%, but the BUG strategy Accuracy is 95%-100% because we combine 4 indicators or 1 oscillator and made a powerful bug strategy, it will always work in the market or this strategy is permanent, you can earn a good profit by using it.

Follow these 3 steps before start trading--

1. TECHNICAL ANALYSIS-
Check Technical-Analysis, Go to the web. of tradingview.com and check Technical and Analysis of the market. Get the idea of the day, Where is market going and what's the condition of the market.

2. NEWS-
Read News of the Forex market and go to the web. forexfactory.com and check, which time News interfaces the market, be alert this time News impacting the market you don't trade in it.

3. MARKET STRENGTH-
If you want to know that, Which time you trade on the currency pair, Yes it's very important to know which currency is better for trading. For this, you have to check the strength of the market. Go to the web. livecharts.co.uk and Check currency pair

For Example:
EUR and USD, if EUR pair strength is HIGH and USD pair is LOW (only 1-2 point) then Select these pairs EUR/USD it's the best currency for trade. If 2 Pair EUR and USD HIGH and 2 Pair has been LOW means it's not perfect for trade.

(RULES OF THE BUG STRATEGY)

It's a very important rules guy's please follow the rules.

-This Strategy gives you the best result because it always works in the market. The strategies give you 90%-97% accuracy signals you can make daily 40%-60% profit of your account balance.

Following rules and conditions:

•You have started trading with a big investment. I recommend you deposit minimum of 50$ - 100$ or more, because with low investment you may be loss.

•You have to trade when the strategy gives you correct or all predictions. If you do not get all the predictions, then you do not have to trade otherwise you may lose.

•You always have to use 1%-2% of your account balance. If you use less or more amounts then your profit may decrease.

•Don't put a lot of trade in one signal, or in a day don't trade more.

•Before start trading watch the market 20 minutes.and trade only the rising or losing direction trend.

•Don't Trade in volatility or fluctuations market.

•Its bug strategy always gives good results. It means no you can use all your money in 1 trade, Don't make this mistake.

•You can use it on all platforms like- Quotex.io, Olymp Trade,IQ option, Binomo, etc..
•With this Strategy you can trade on commodities, currency-pairs, metals, indices, cryptocurrency.

•Avoid news, Sometimes the news comes in the market and the market starts with very high volatility. When the news is running in the market, you do not need to trade in the market.

•Be Alert on Saturday or Sunday because these days the market is closed and OTC is running, the OTC market is very risky, and it is also a fake market, but our strategy also works well in it. In the OTC market you have to trade at least because you should not take any risk. Sometimes the market is Neutral, you lose the trade you put in this neutral market. If 1 candle is green and the 2nd is red and if 7 to 10 candles are made like this, then you understand that the market is still running neutral.

Note:- If you do not follow the rules, you may lose in trading, ***we do not take any responsibility for it.***

You must have an upward or downward trend before you start trading.

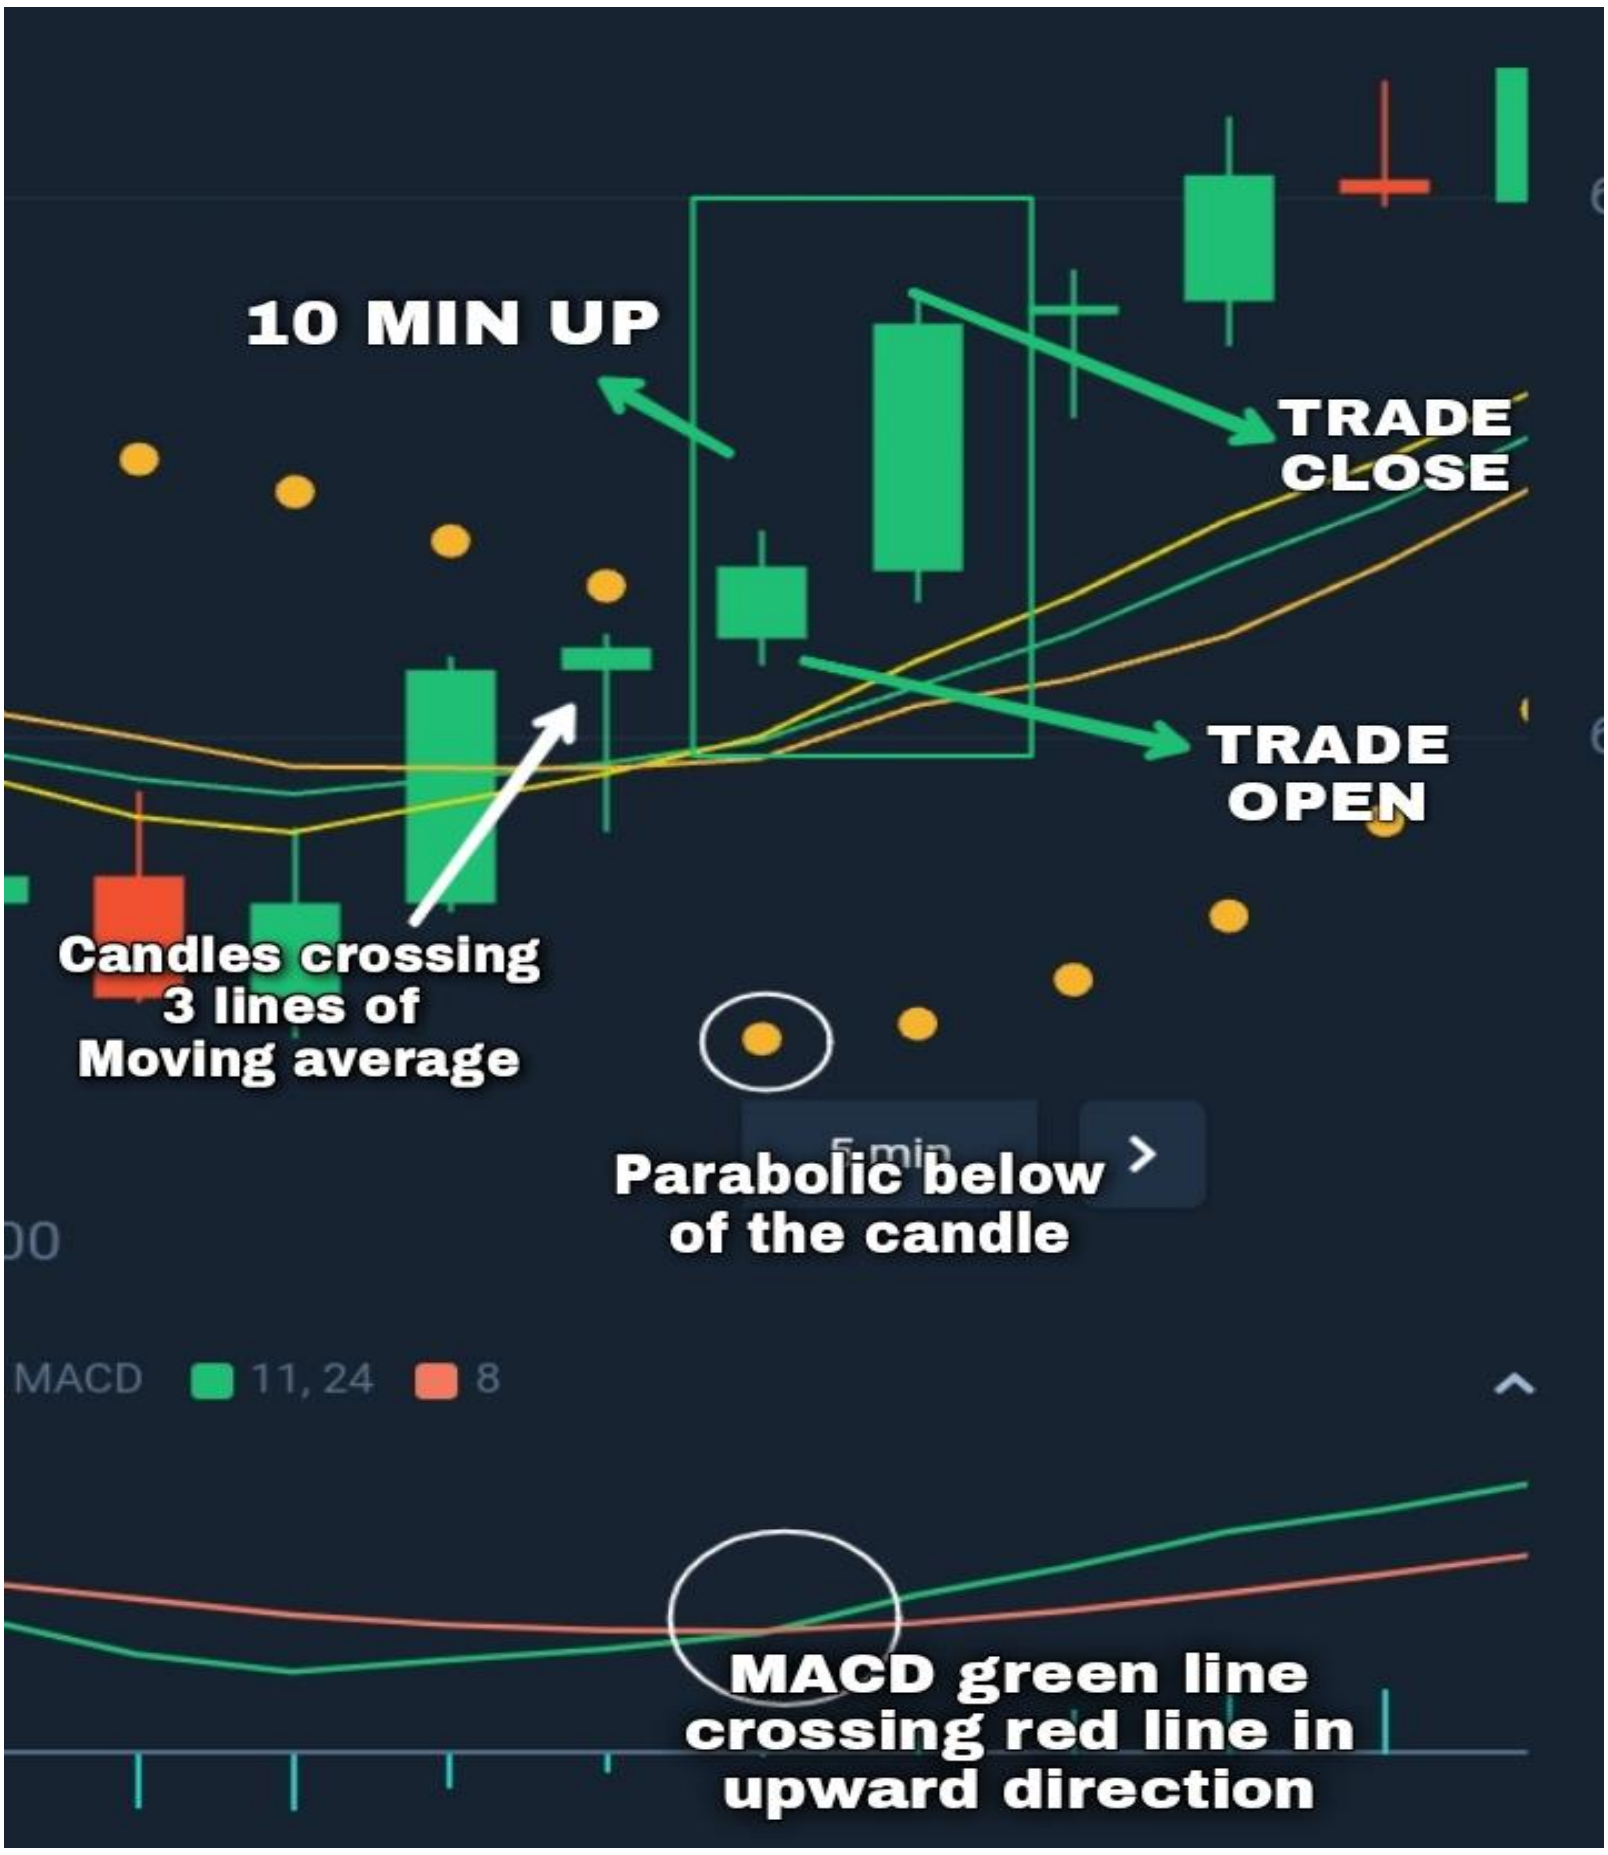

FOR UP TREND SIGNALS

♻️INDICATORS & OSCILLATORS:-

- **EMA-** (Settings- value-10)
- **SMA-** (Settings- value-10)
