# BMM (BUHLE MPHO MAKHOBOKOANA) strategy.

DERIV BROKER KILLER.
@dr.Ivyson

# DEDICATION

- This PDF is dedicated to all traders who are struggling with understanding the basics of BOOM & CRASH, volatility indexes . Each of you in your own unique way will grasp the insight and guidance of this pdf.

- It will help you to find yourself in the trading sector, with this pdf you will eventually feel confident , disciplined and consistent.

- The main goal of this pdf is to make sure that you understand the following subjects.

# DERIV BROKER KILLER

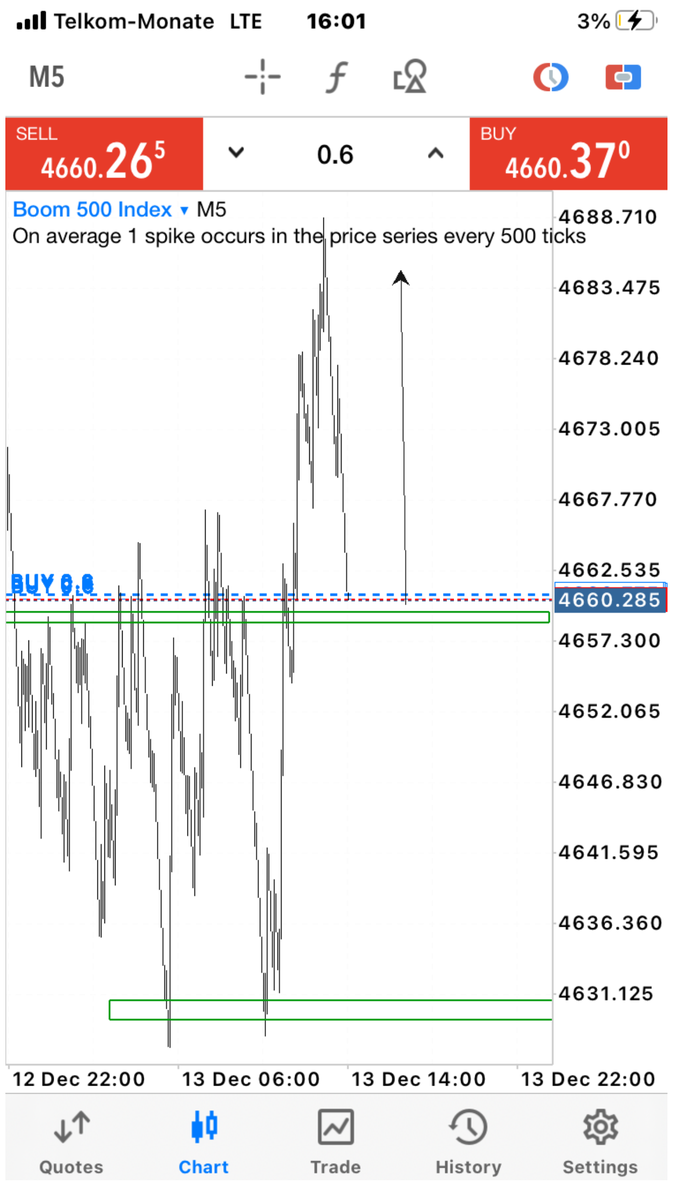

# WHAT IS BOOM & CRASH

- BOOM and CRASH are indices that are currently available on deriv.com platform only.

- They include Boom 500 , Boom 1000 , Crash 500 & Crash 1000.

- Boom indices has like a default sell circle , which means that regardless of the trend or market structure, the default characteristics of Boom is BUY

- Crash indices are always on the sell circle but buy at intervals depending on the analysis

BEFORE & AFTER OF BOOM 500 index .

# BOOM 500

- B500 is half as volatility as Boom 1000 according to my calculations and experience.

- B500  plays in the sell cycle , meaning that it’s sells can be much stronger if the market structure is on a downside, especially on M30 and H1.

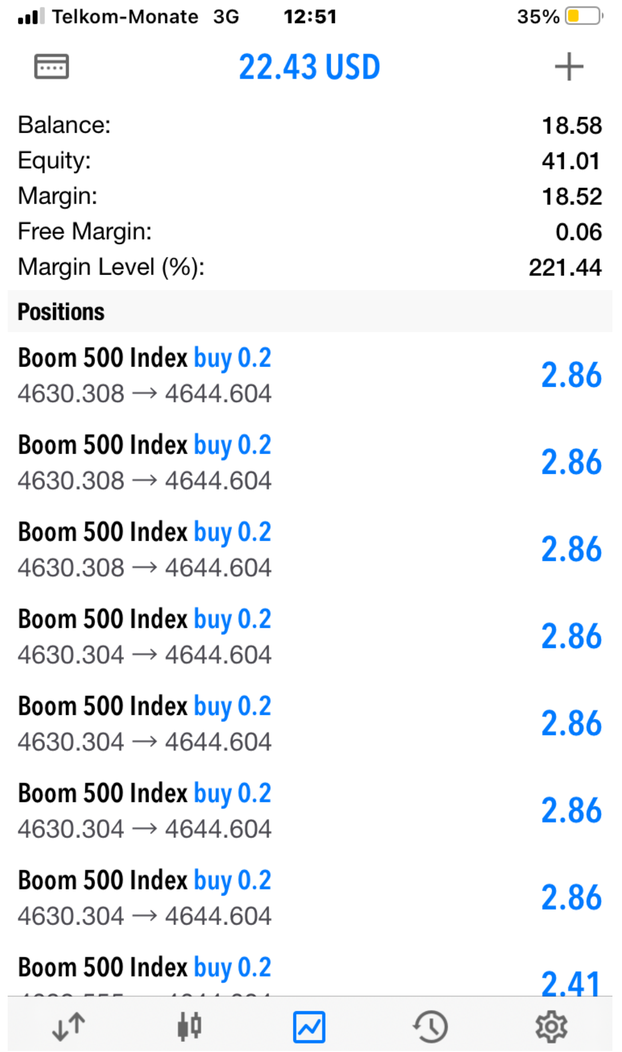

- Goo knowledge of risk management is the first step to trade B500 successfully

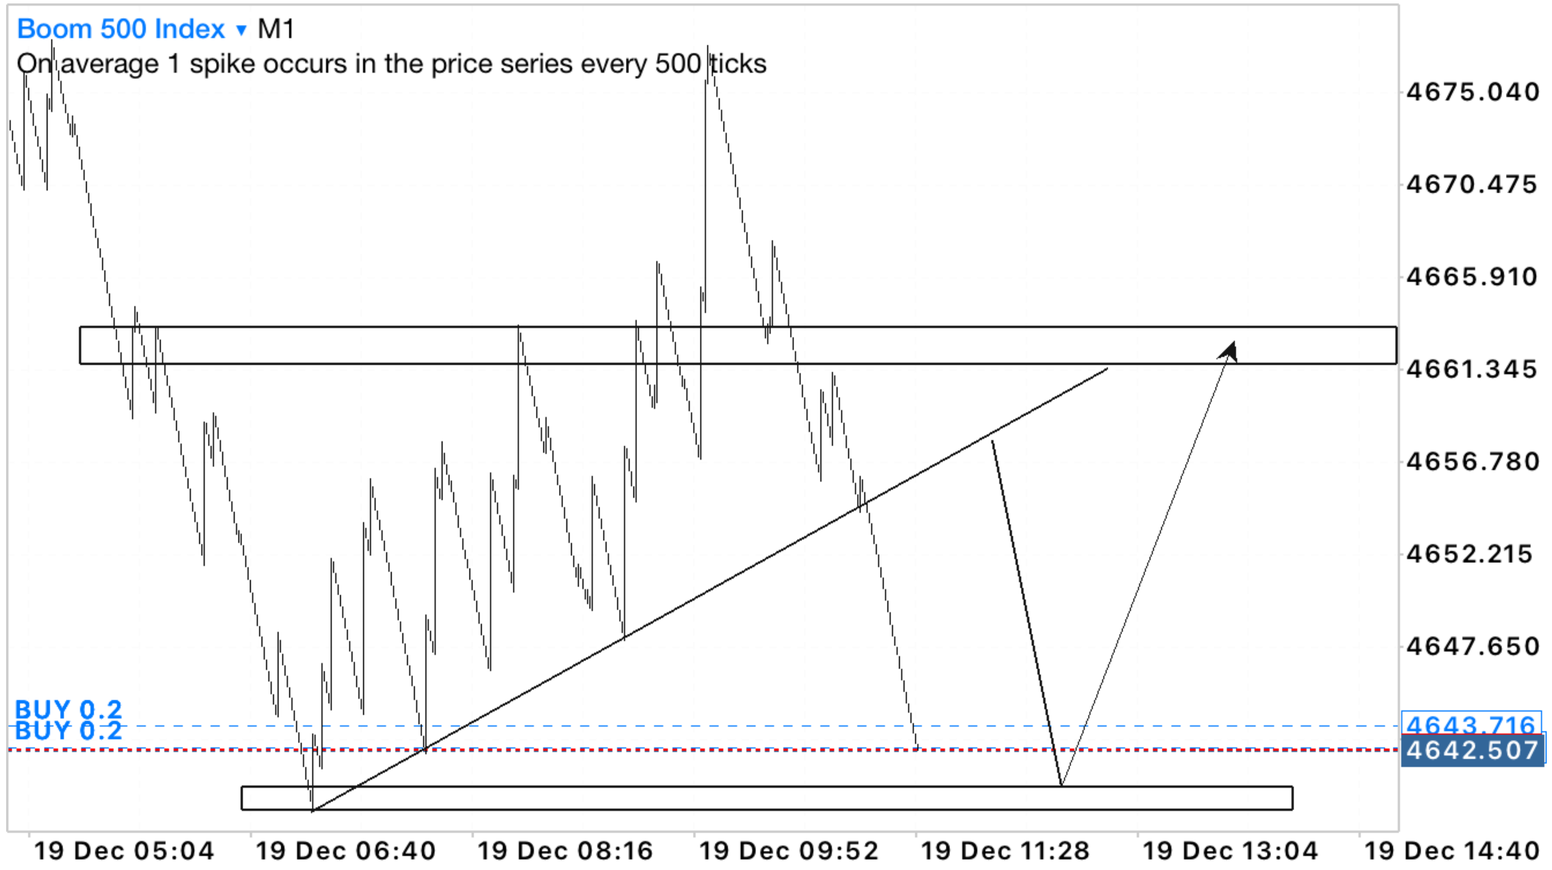

- For Boom 500 index , I usually suggest a risk to reward ratio of 1 : 3  , for every $10 you risk , you must at least expect $30.

- It’s surely a way of growing small accounts. $10 to $30 on a single trade is very possible.

# Boom 500

BOOM 500 is the quicker way to grow your small account at a short period of time , although it’s very important to not abandon all the forex factors. That includes trend lines , support and resistance, supply and demand zones and forex chart patterns.

2 trades that were taken on BOOM 500.
- this is strictly BMM strategy and it'll be extrapolated at the end

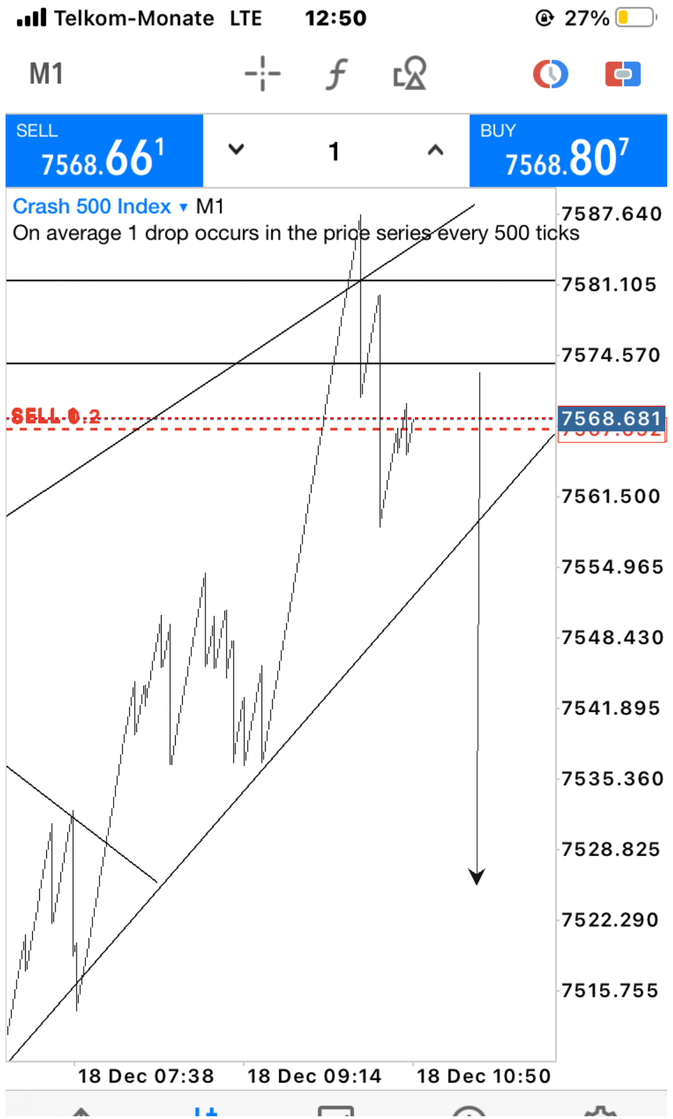

# Great ENTRY and exit levels

- Since we are dealing with investopedias , it’s very important to remind that confidence is key and there are no manipulations , yess the market can’t always go your way but you need to trust what you see and respect the knowledge you’ve acquired throughout your journey.

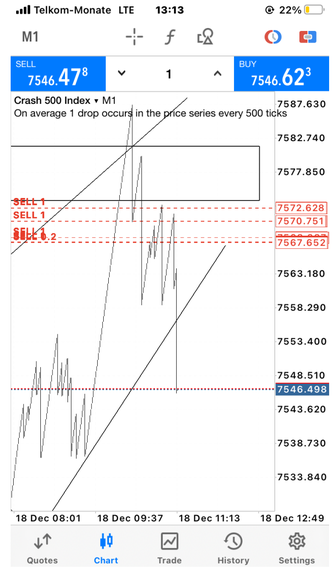

- A supply zone is a good entry point for a sell and a demand zone is a good entry point for buying (especially on BOOM 1000 & BOOM 500)

- Support and Resistance are not fully respected on the zones but they’re a good entry point

- NB : if your demand zone is a good entry point for a buy , the a supply zone is definitely a good exit point. Makes sense right?.

# CRASH 500

# Crash 500 index

- Crash 500 index is the index that tracks the level of volatility that exists within options on the individual S&P 500 indice.

- Crash 500 is said to be not really volatile but the truth is that it’s much volatile than crash 1000 , According to my trading experience.

- Crash 500 is very strong on buys due to its relationship with S&P 500. I can say that fundamentals affect it too but indirectly. The crash 500 can’t be manipulated at all and even the deriv.com broker itself can’t manipulate any of its movements.

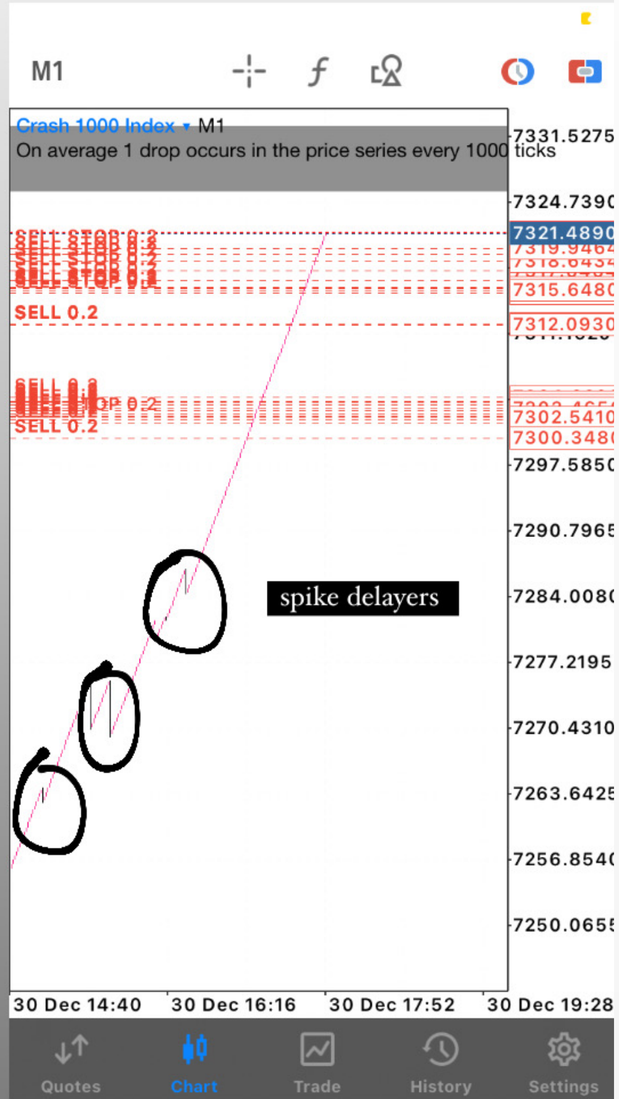

- To trade C500 , you must at least have $30 in your trading account and which allows you to open less than 5 orders…

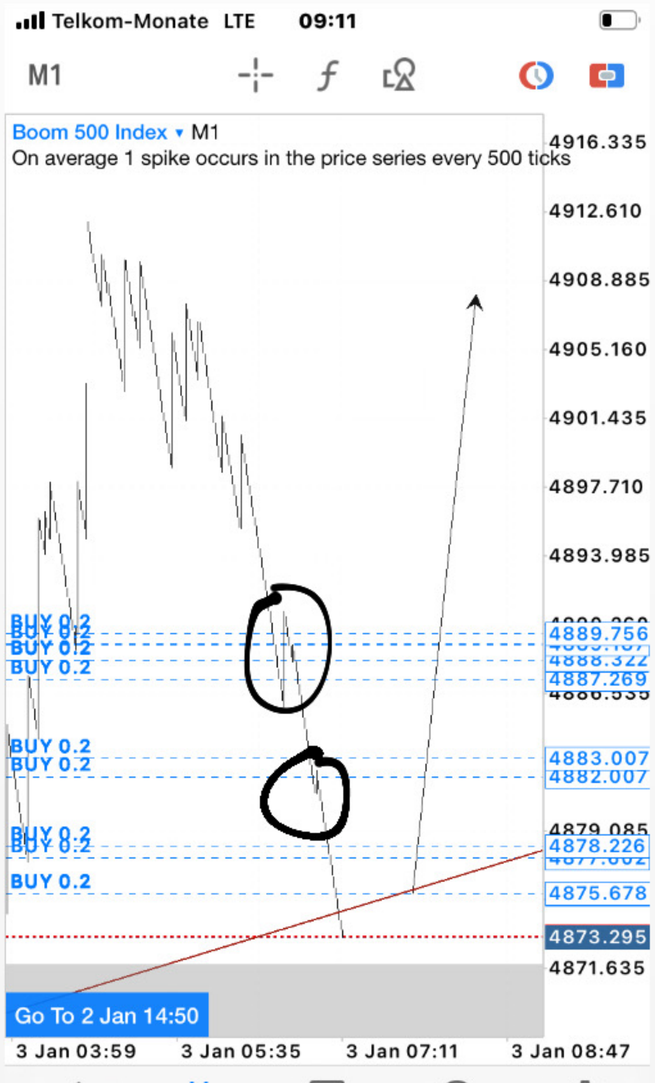

# THINGS THAT DELAY A REVERSAL OR SPIKES

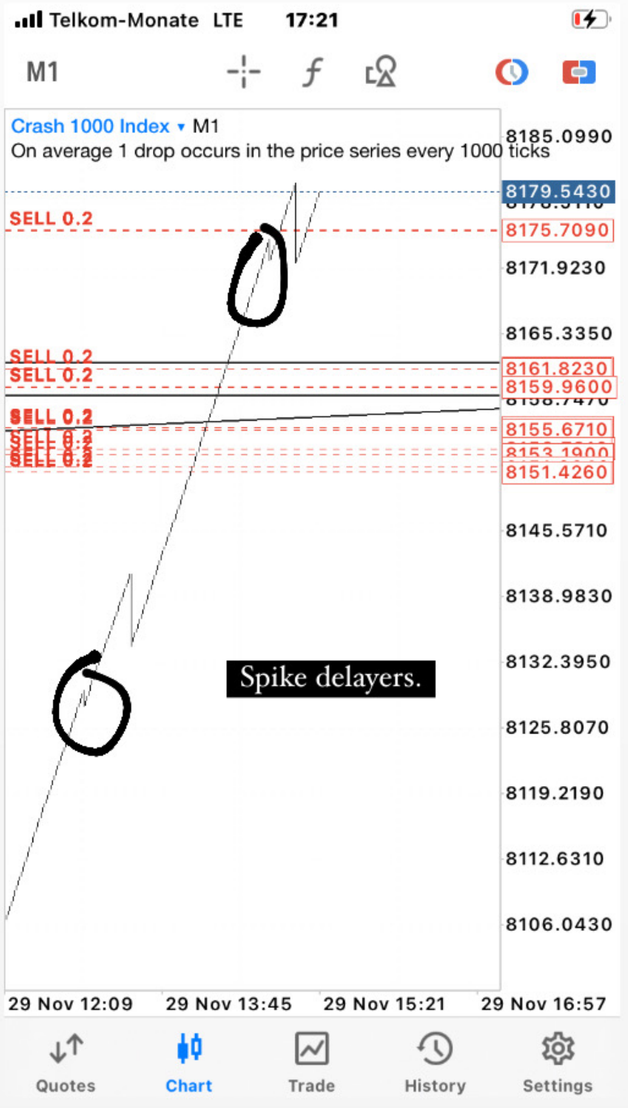

- The market has a way of indicating the current positive direction.
- If your analysis shows that the market will buy & you start getting small rejections on prices to your direction , then that’s an indication that the market is still continuing with its current movement.
- Baby spikes will always be right , they’re an indication that the market is still strong with its movement at that current moment.
- Baby spikes on BOOM pairs  indicate that the bears are still strong.
- Baby spikes on Crash pairs indicate that the bulls are still strong.

# SPIKE DELAYERS

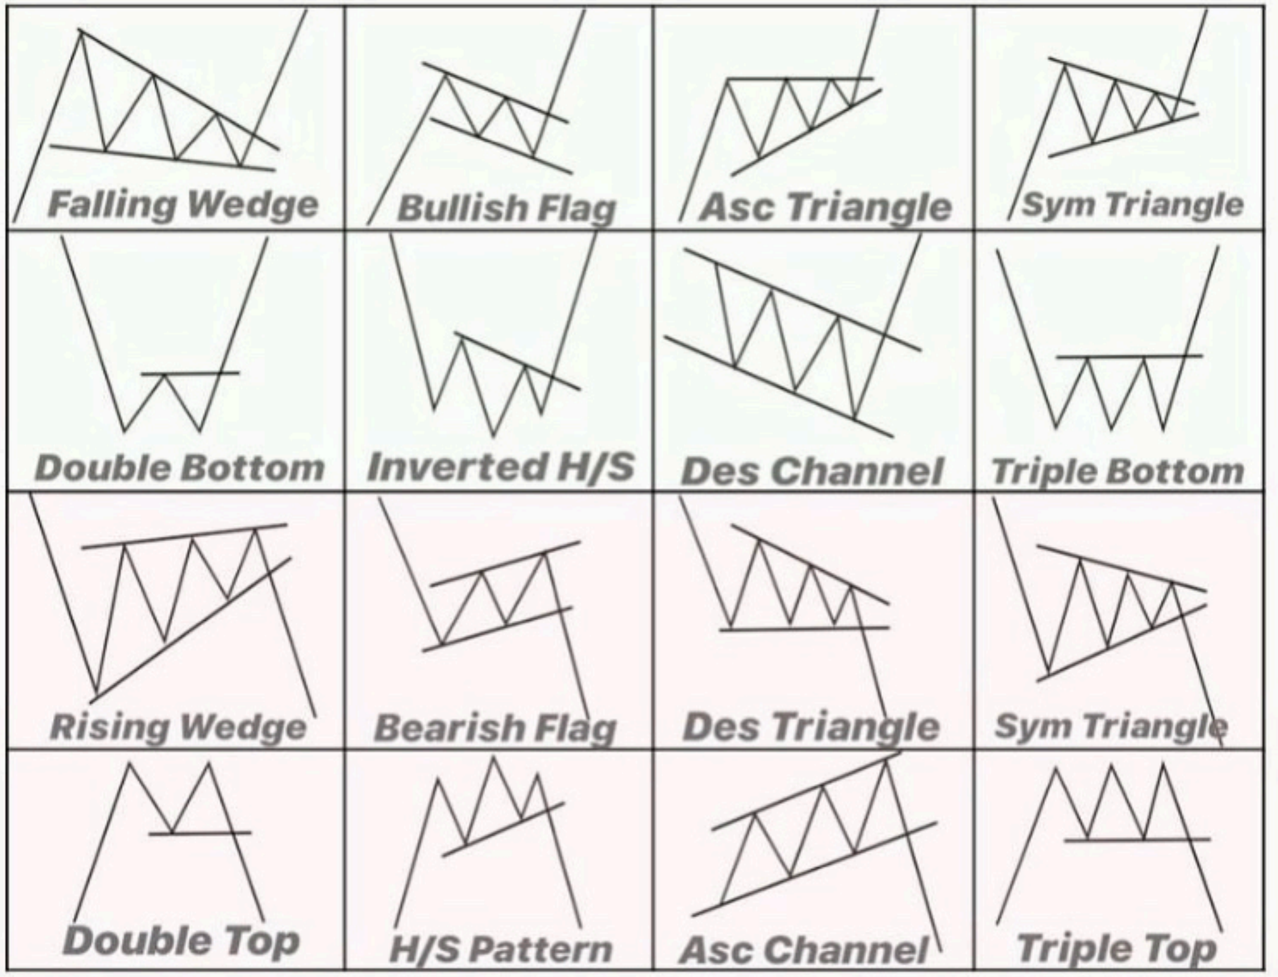

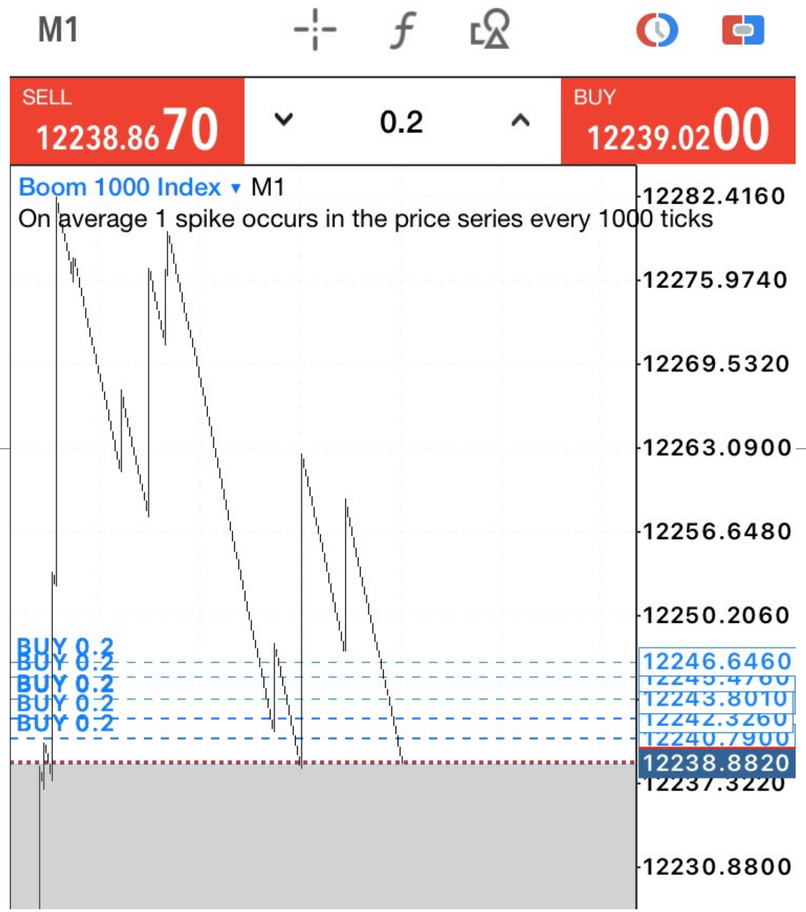

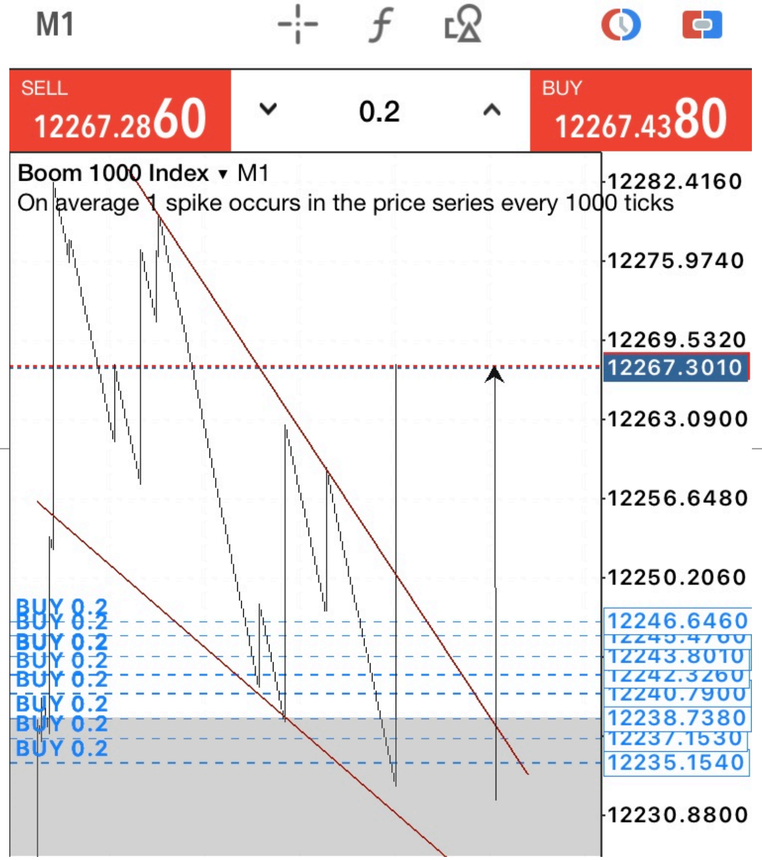

# BOOM & CRASH PATTERNS.

- As we all know that price action is defined by its chart patterns
- BOOM and CRASH does respect a few of our forex chart patterns
- These patterns are mostly visible to show continuation or reversal.
- As a trader , it’s very important to visit the charts consistently to detect which chart patterns behave well and which chart patterns are not respected most of the time.
- The patterns include : Wedges , Channels , Flags , pennants, double tops and double bottoms.

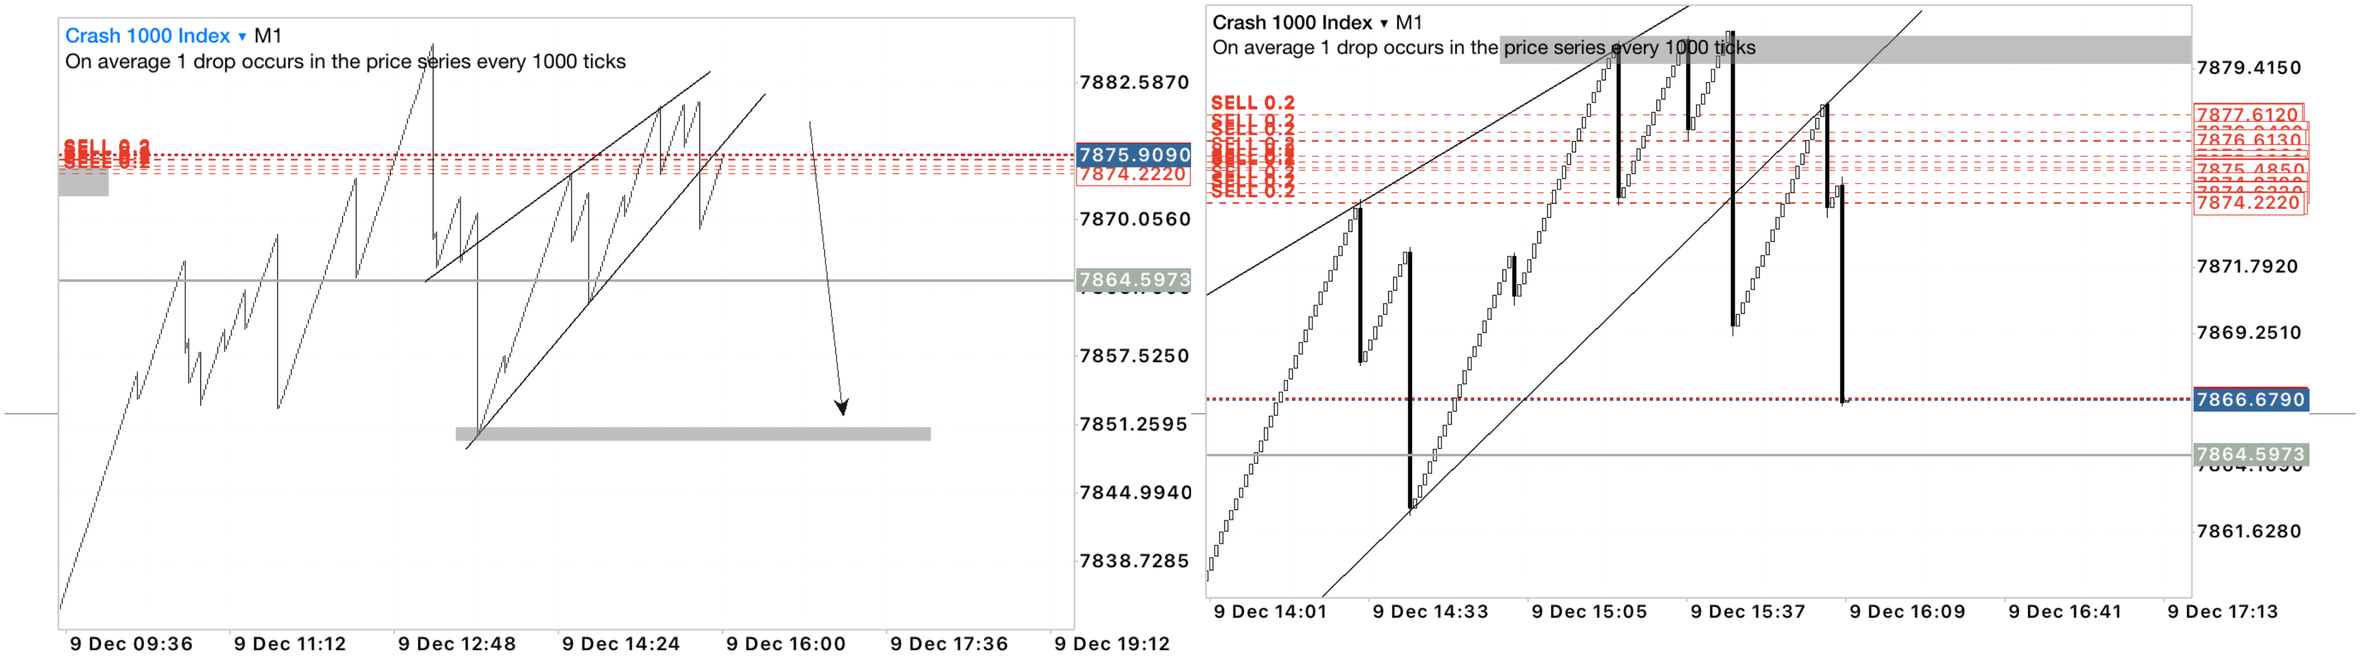

# Falling wedge on BOOM 1000🔥

BOOM 1000 was on a bullish momentum, so understanding that we on an uptrend and seeing a continuation pattern makes it more easier to enter with confidence.

# Ascending channel on CRASH 1000🔥

Channels on these pairs are mostly the signal that the market was accumulating for a drop to the downside.
The most important thing on BOOM & CRASH is to wait for a full breakout!

# BMM STRATEGY 💎

- BMM STRATEGY (BUHLE MPHO MAKHOBOKOANA) strategy.
- BMM strategy consists of supply and demand and a trend line that defines it.
- Entry levels and Exit levels are very clear and accurate.
- Accumulation and Our Order blocks defines the movement of the current market price.
- Strictly for investopedias.

# BMM STRATEGY

# BMM STRATEGY

DEMAND ZONE = BUY

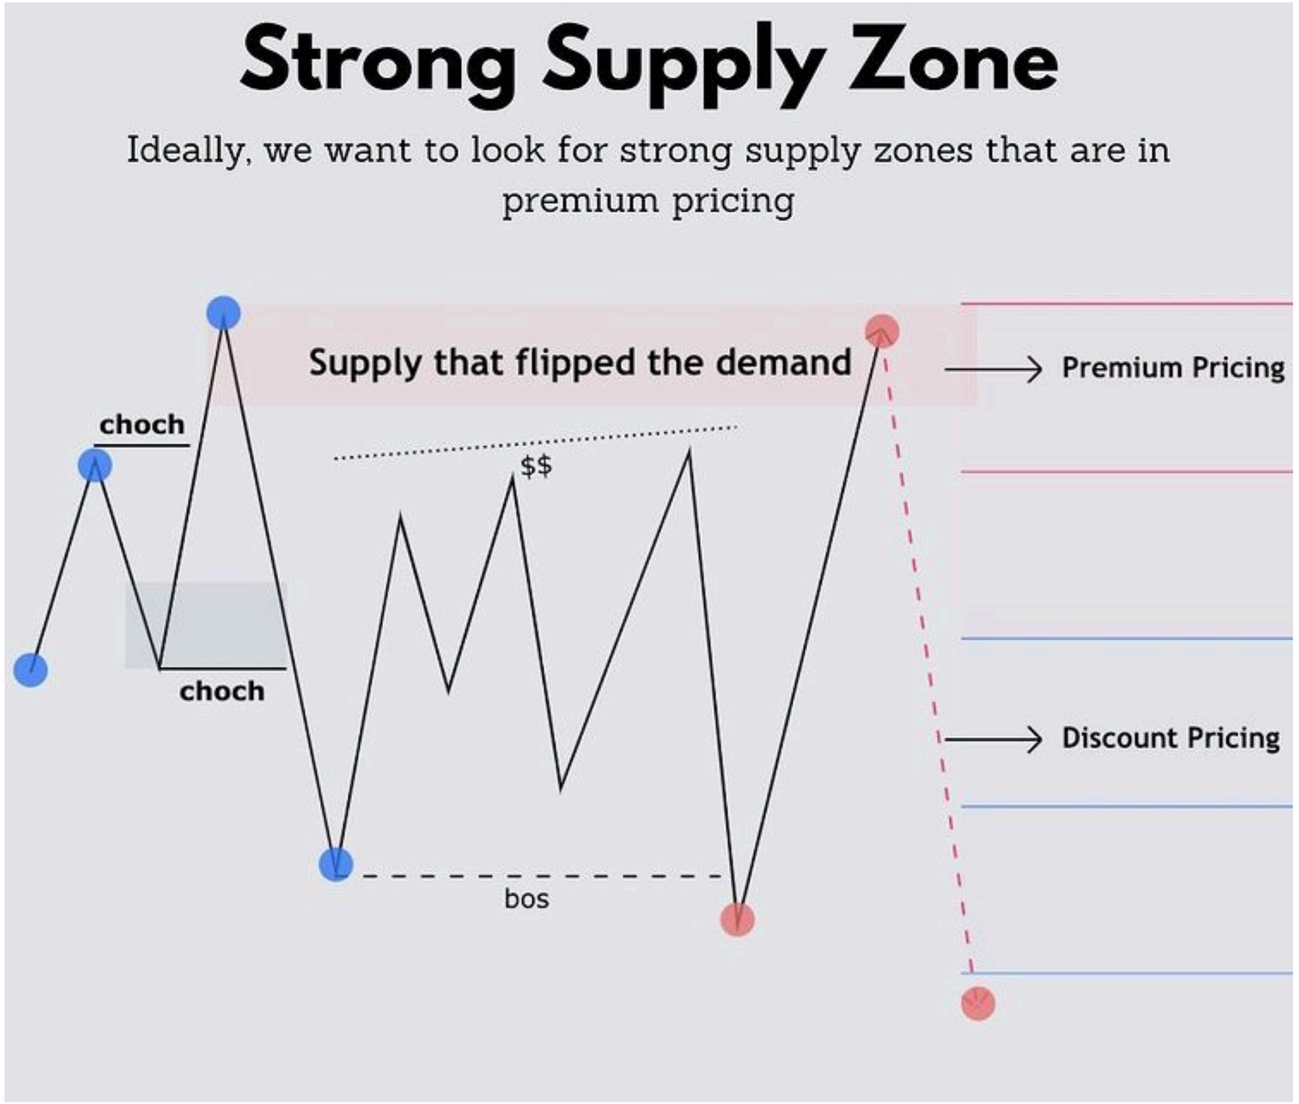

Demand zone is where all the big buyers have placed orders  and it’s a price area below the current price action where there is a strong buying interest.
Since we are trading investopedias, we can’t say it’s where banks buy , but in simple terms , it’s just a zone where big buyers look for buying opportunities, with a high risk appetite.

# BMM STRATEGY

## SUPPLY ZONE

The supply zone is where all the big sellers are located , it’s a zone where big investors look for selling opportunities with a high risk appetite .

# HOW TO FIND SUPPLY AND DEMAND ZONES

- Look at the chart and try to spot successive large successive candles. It is important that price moves a lot

- Establish the base from which price started the quick move.

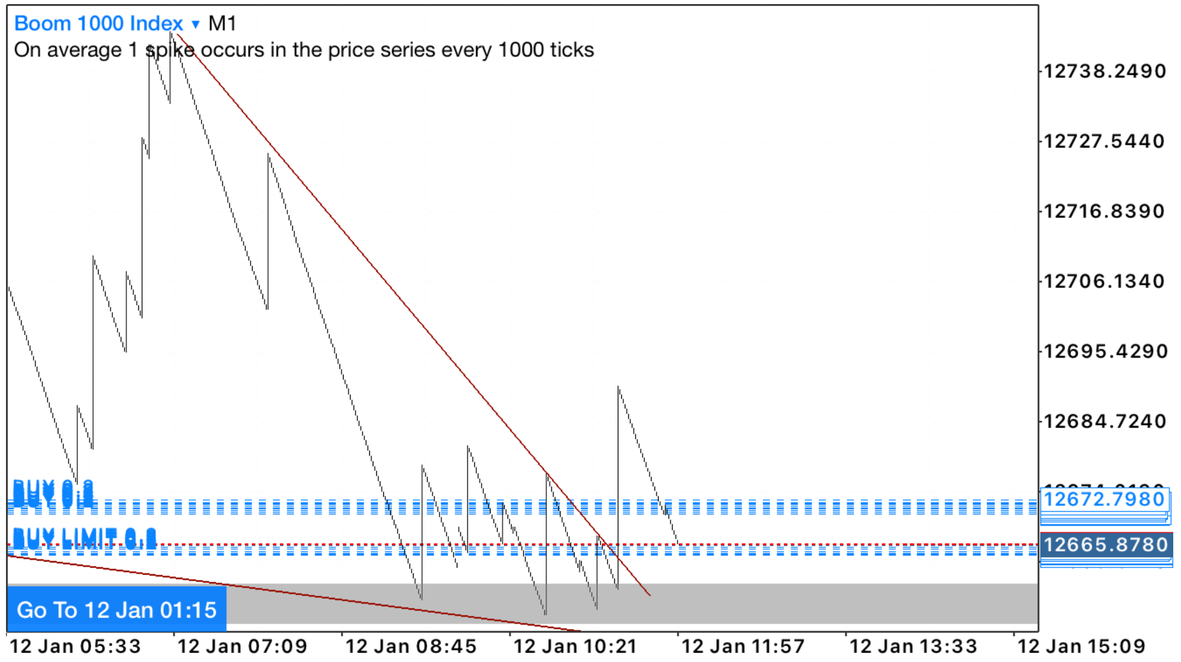

- Most of the time , before a large move you have a small sideways move that is where your supply or  demand zone is

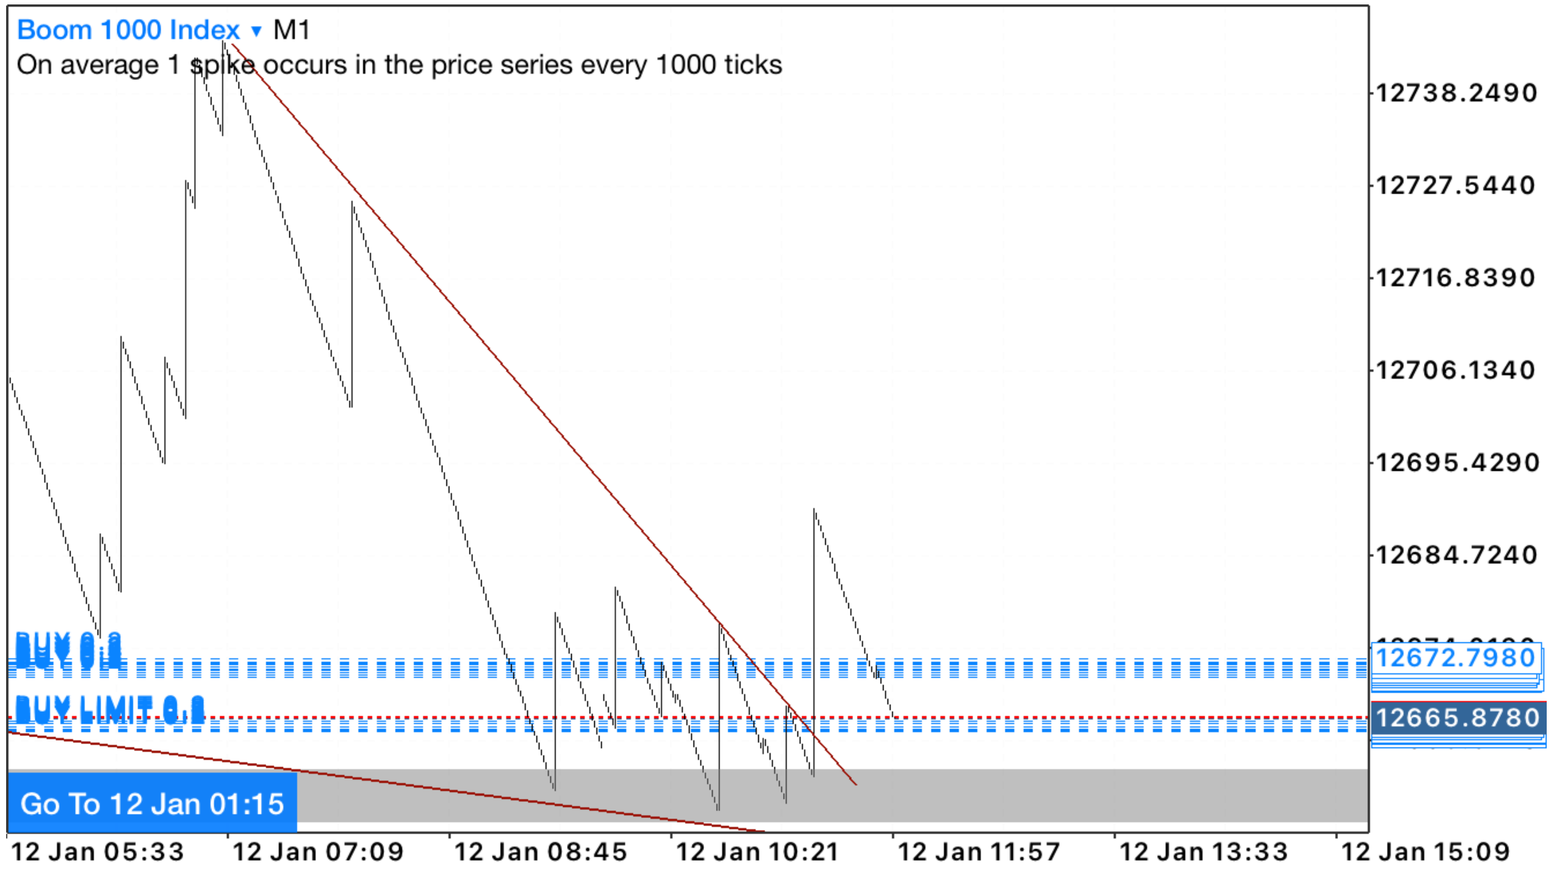

- Happy Supply and Demand trading

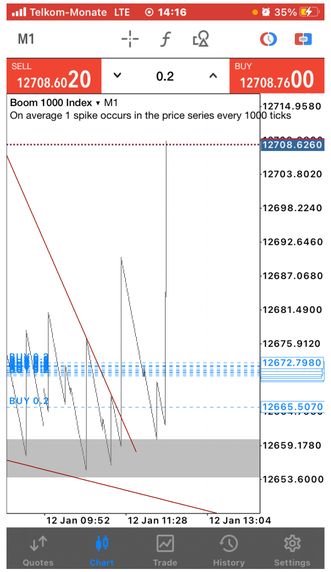

# DEMAND ZONE ON BMM

BOOM 1000 index created small moves before it shots to the upside , looking at our past moves , we saw that we have a demand zone because that's where we got our big moves.

Check the next page!
NB : the trend line defines BMM as a whole

Boom 1000 respects DEMAND ZONE.

# MINOR DEMAND ZONES ON BMM

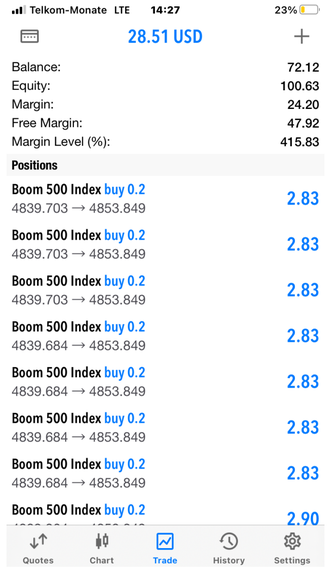

- BOOM 500 index gave a big move on the middle zone , which triggers big buyers into placing orders on the same zone.
- Take note : Boom 500 respected the BMM strategy because it reversed on the supply zone and went to the major demand zone below and then shot up , and it let to it breaking out of our BMM trendline.
- Take note : Before we get an a big move , we must at least get a small move.
- Check the next page

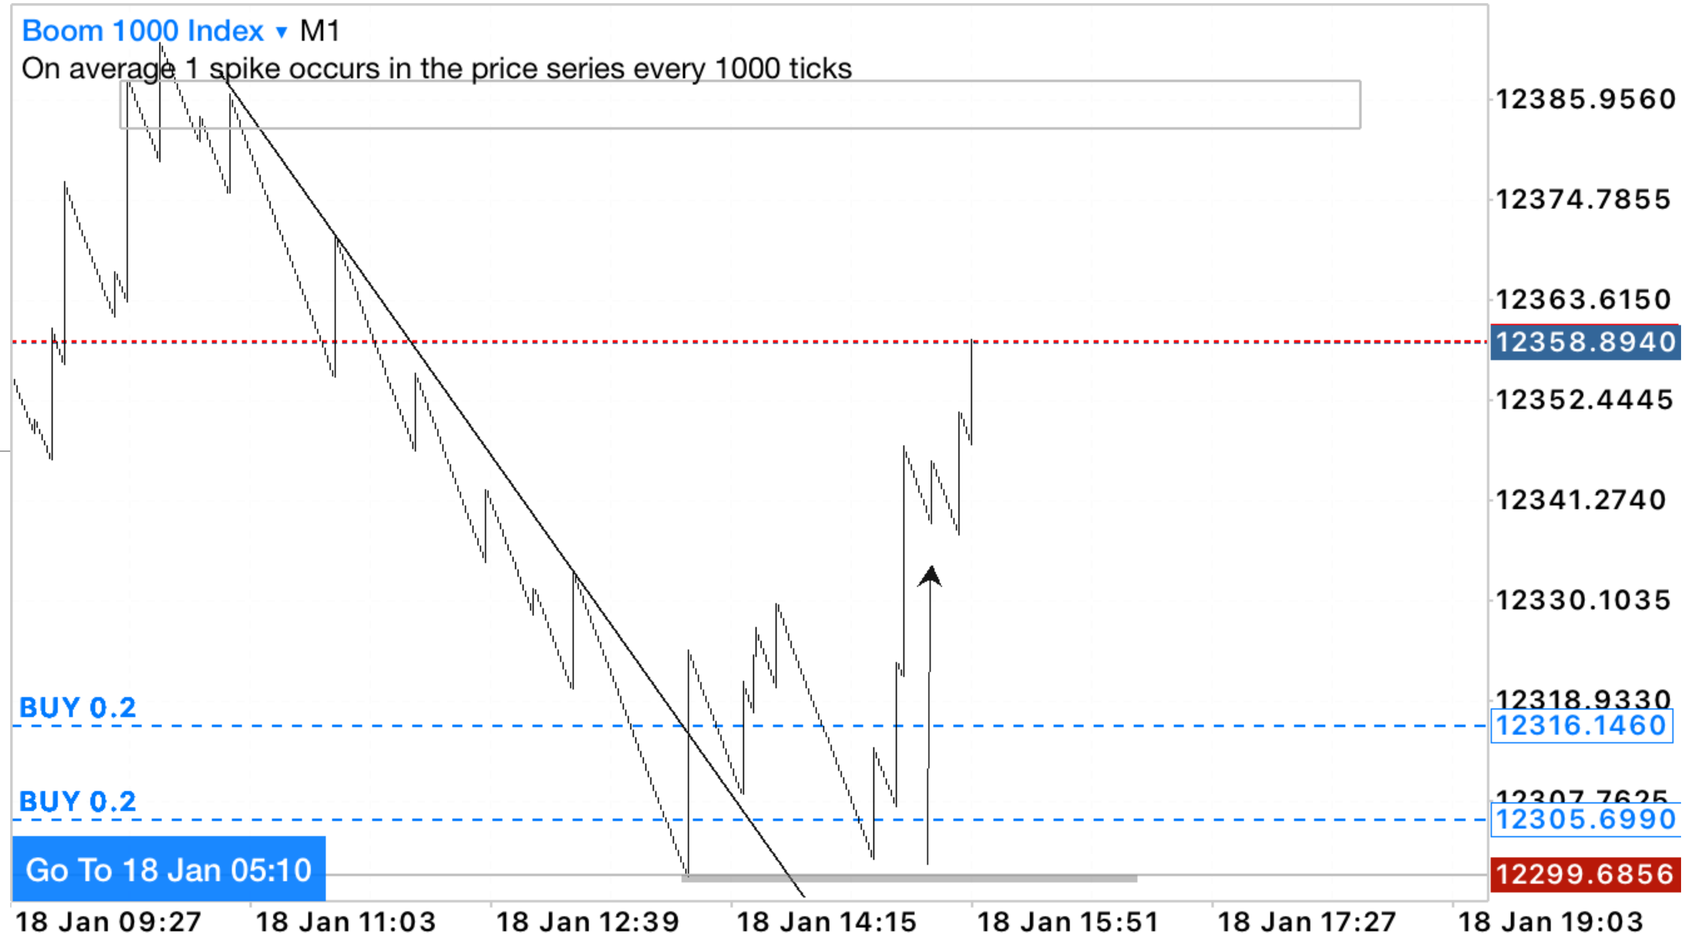

FROM THE PREVIOUS PAGE , you see that boom 500 played out very well and pushed till our supply

# BMM IN ACTION

BOOM 1000
1. We had a supply zone and demand zone
2. We had a trendline that must be broken before we act.
3. Once the trendline was broken , we waited for a retest and entered.
4. Patience

# BMM IN ACTION

Crash 500 index.

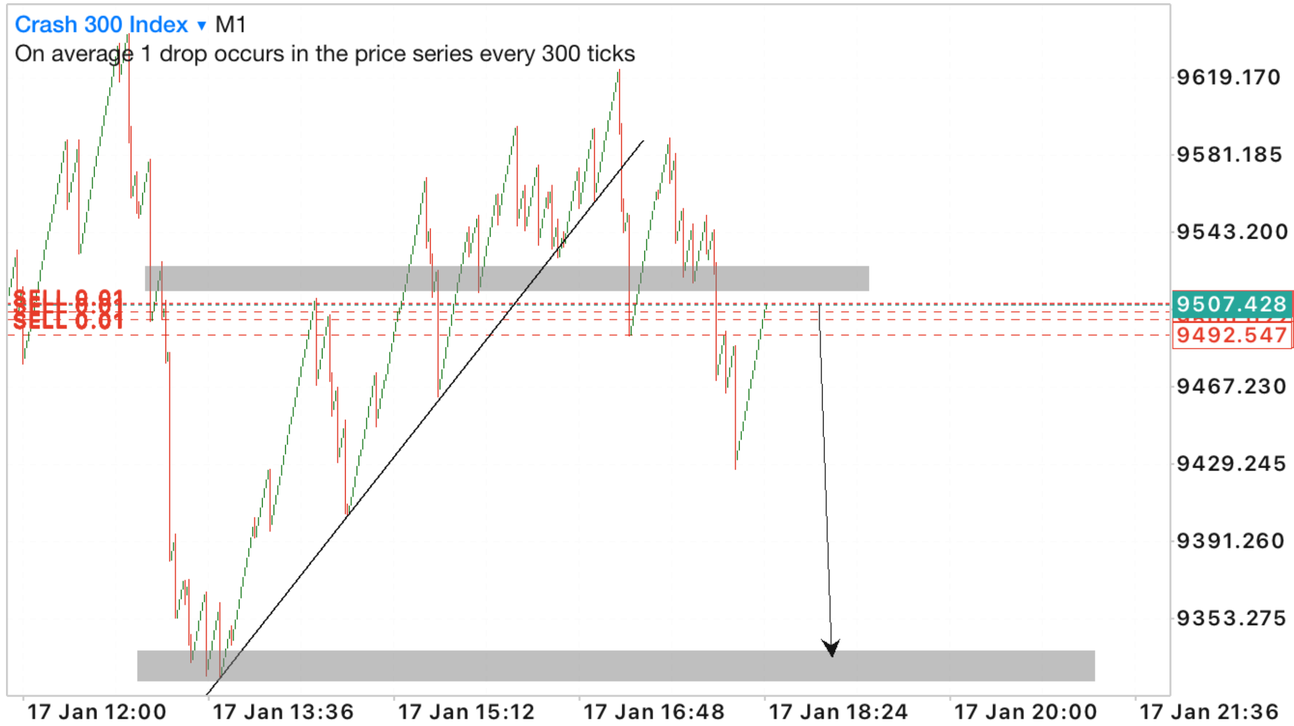

1. We had a supply and demand zone
2. We had a trendline that tracks movement.
3. Once that trendline was broken , we look for selling opportunities.
4. Patience

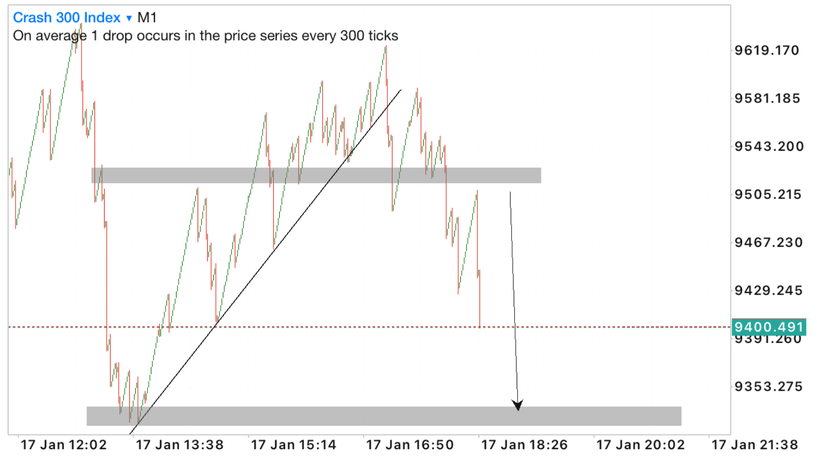

# BMM IN ACTION

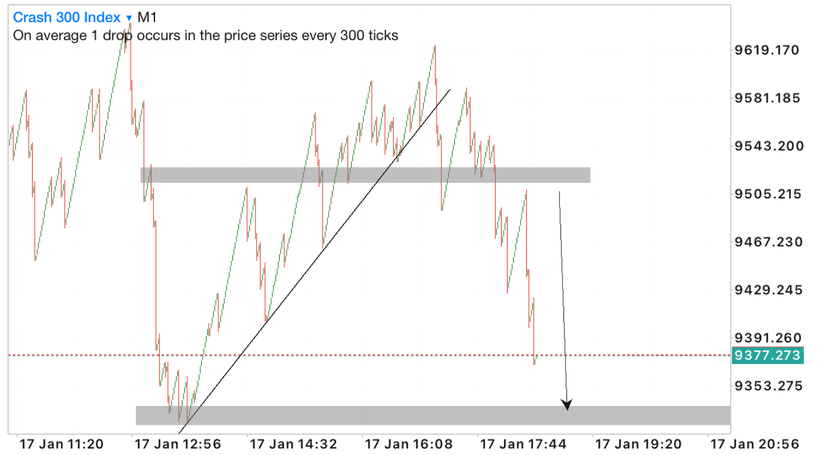

Crash 300 index , new added index respected the BMM.
1. Supply and Demand
2. A trendline from your demand to your supply , we wait for a break out and a retest or retrace.
3. We wait for a clear breakout and then we enter.
4. Patience

Check the next page

Crash 300 index respected BMM and it headed to our demand as supposed to . When it gets to our demand, we look for buying opportunities

# BMM STRATEGY TIPS

- On BOOM 1000 , BOOM 500 , BOOM 300 ; we only looking for buying opportunities, we don’t take sells (WHY : Because 1 spike can take out a 30 minutes trade out.

- On BOOM pairs , we only buy on a demand zone and only when the market is on an uptrend.

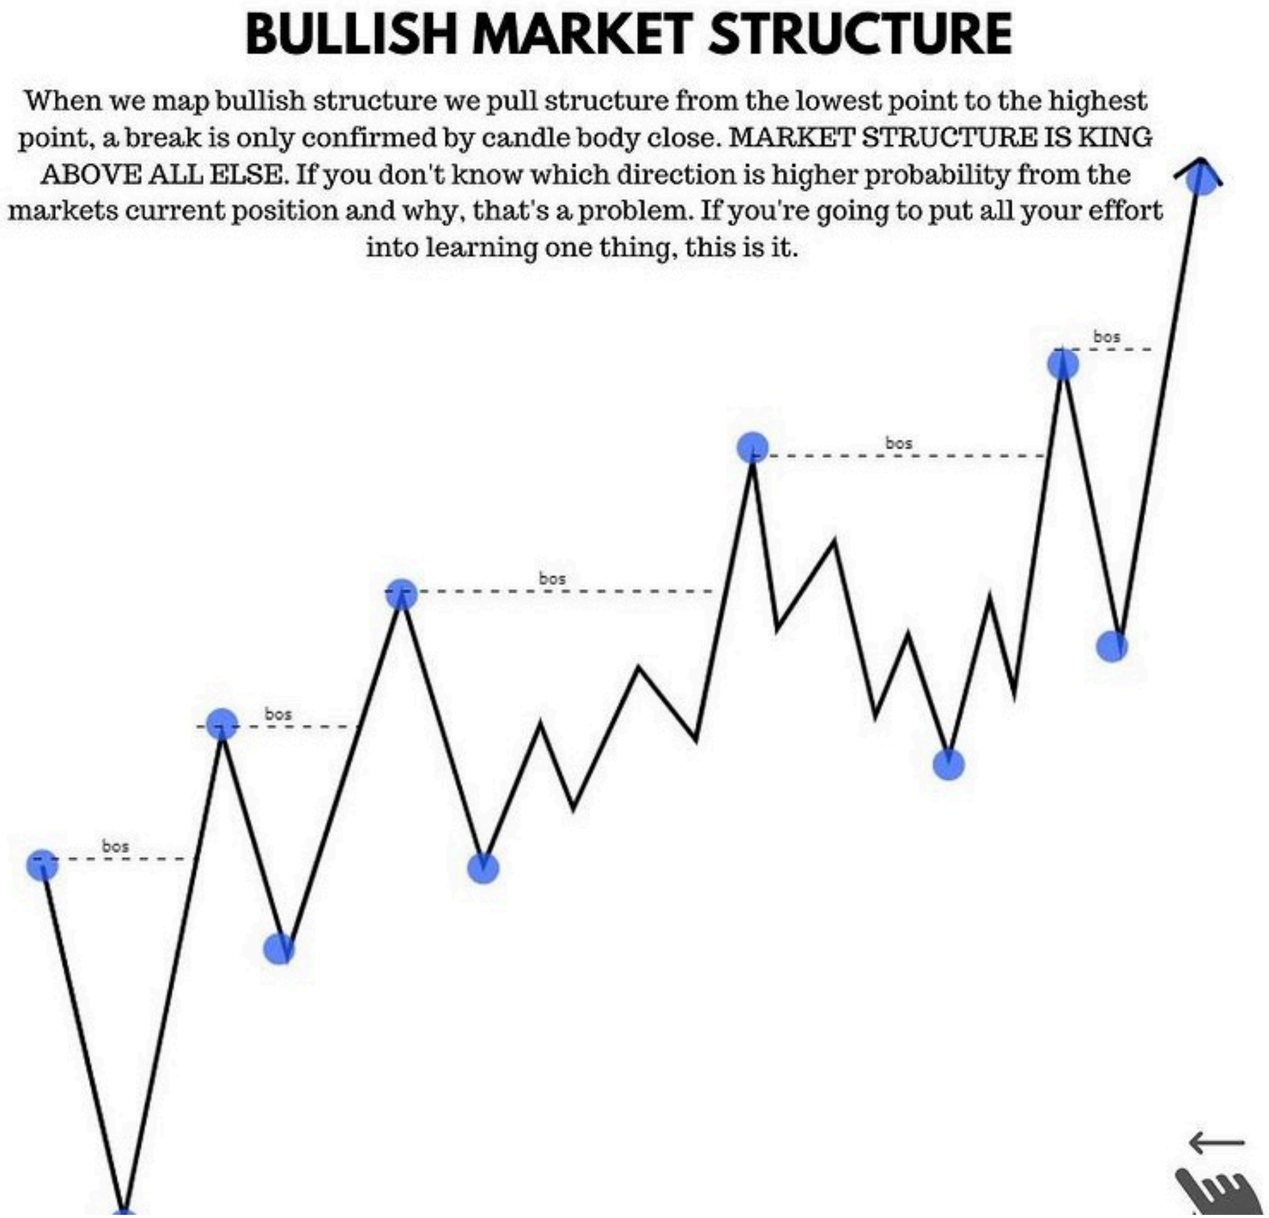

- BOOM 1000 spikes mostly after 45 ticks after a huge drop.

- Time intervals for BOOM pairs is mostly around 17:15 , 17:45 , etc for every hour.

# BOOM pairs

On BOOM pairs we only looking for buying opportunities and buying opportunities are available on a BULLISH market

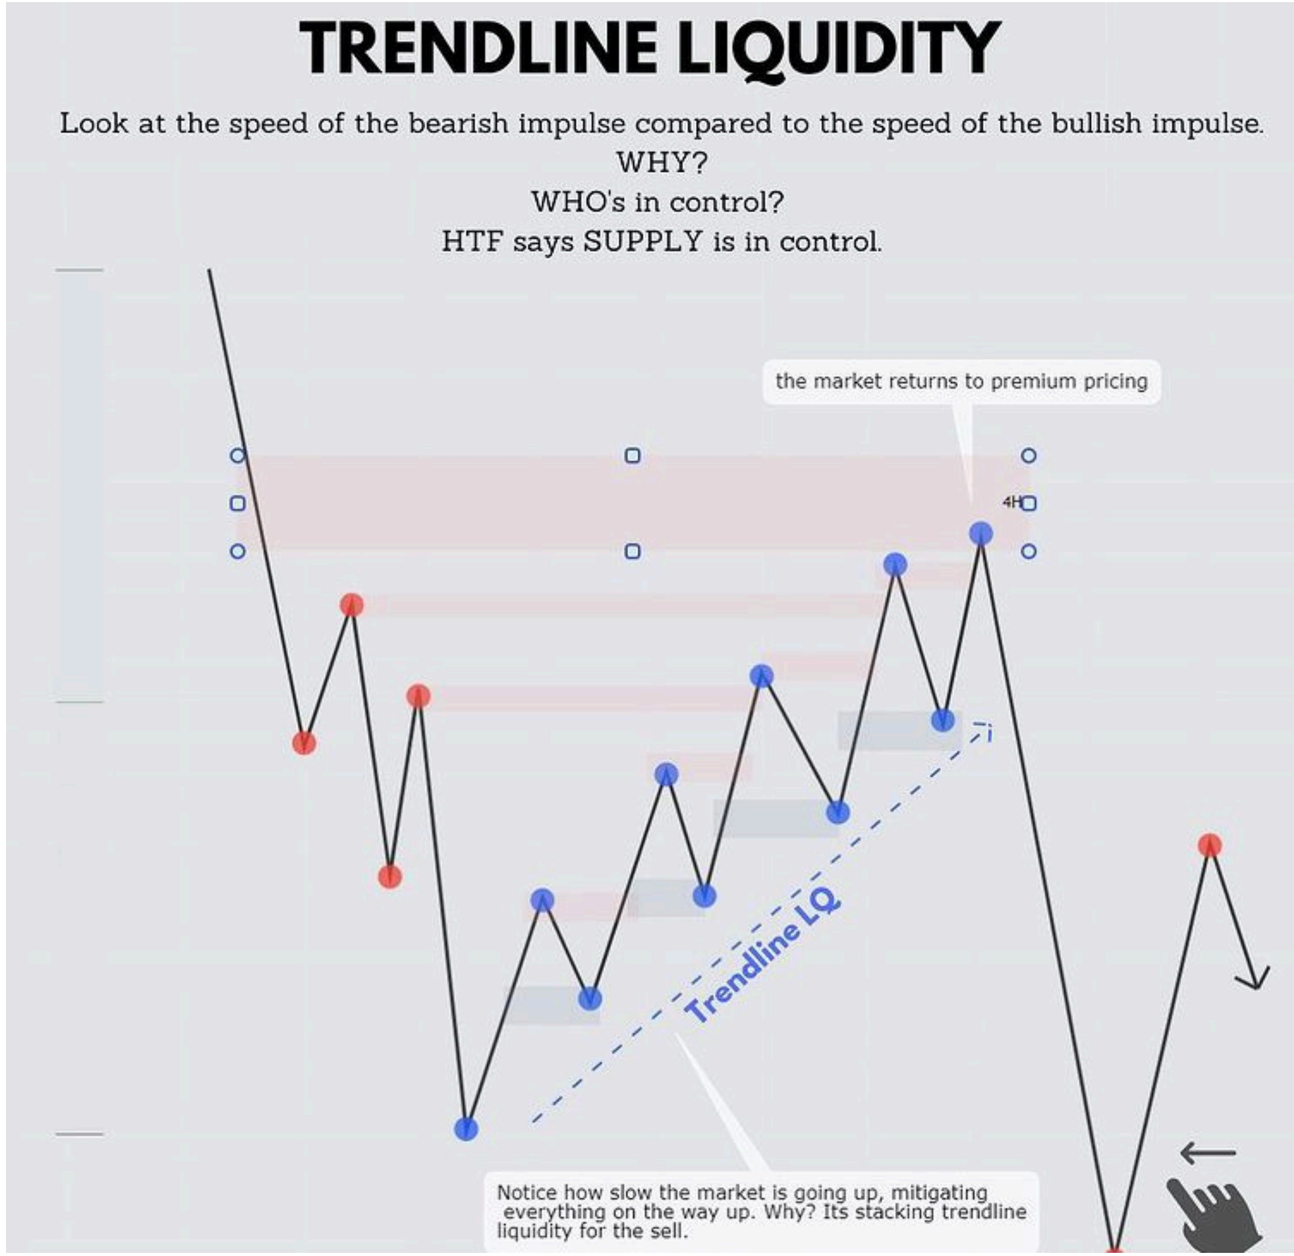

We enter buys before the market drops below our last higher low.

# BOOM pairs.

According to technical analysis :

Once the market drops below our last higher low , we start looking for sells on that particular market. We stop buying boom pairs once our higher lows are violated.

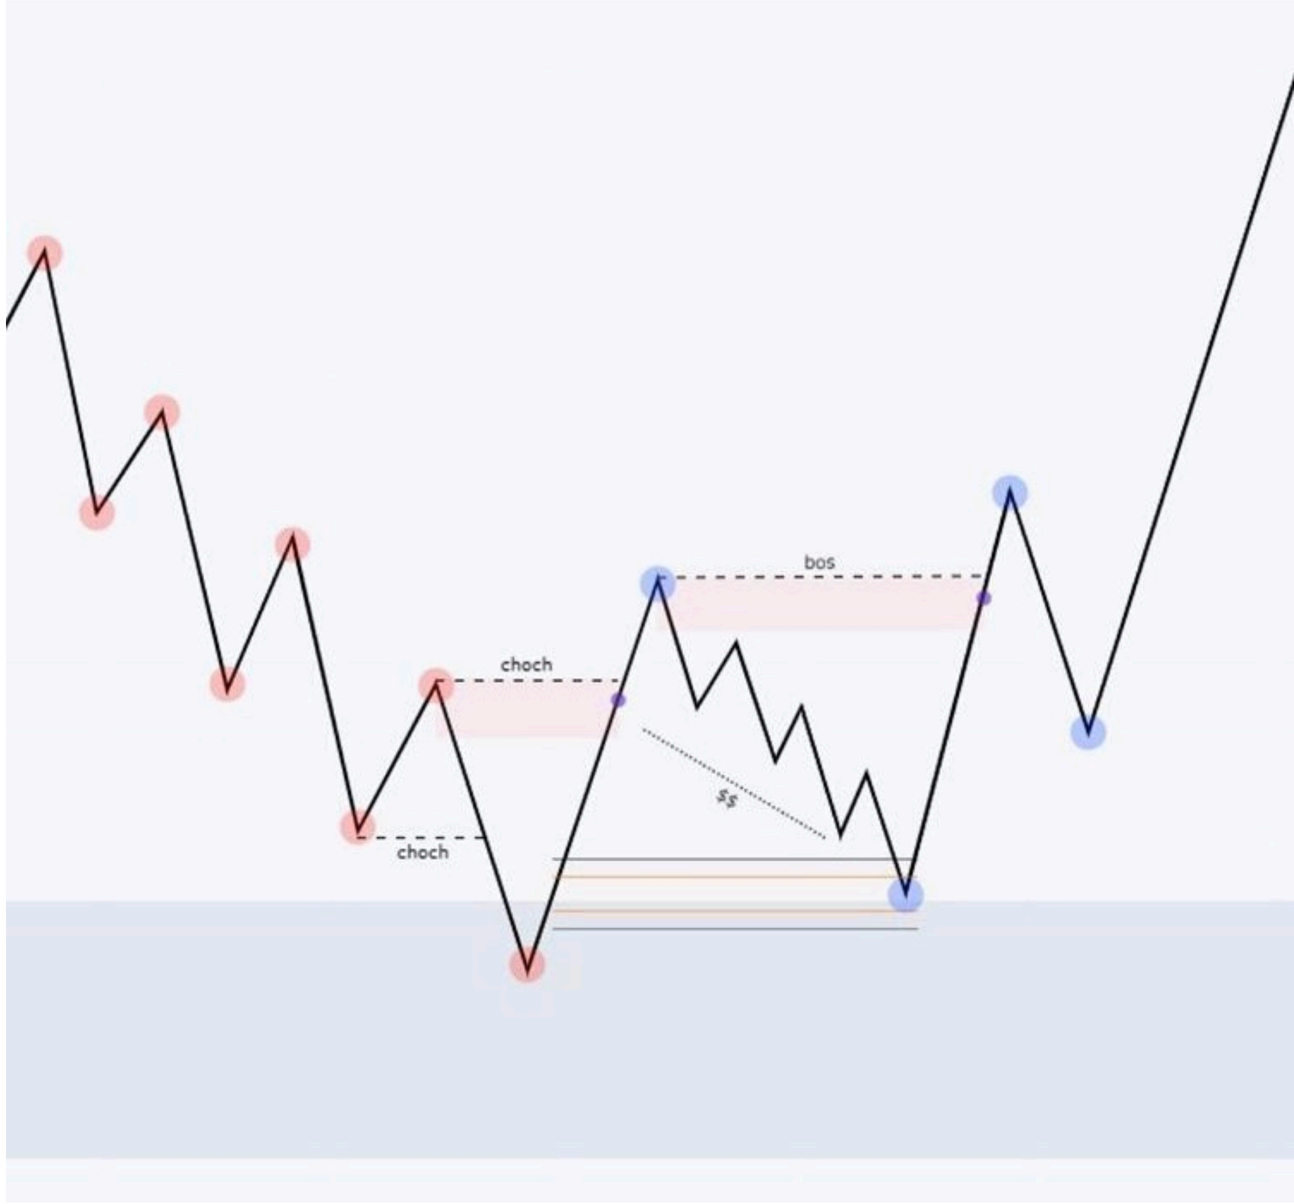

# BMM tips

- ALWAYS cater for your supply and demand.

- ALWAYS have a trendline to keep track of the direction of the market.

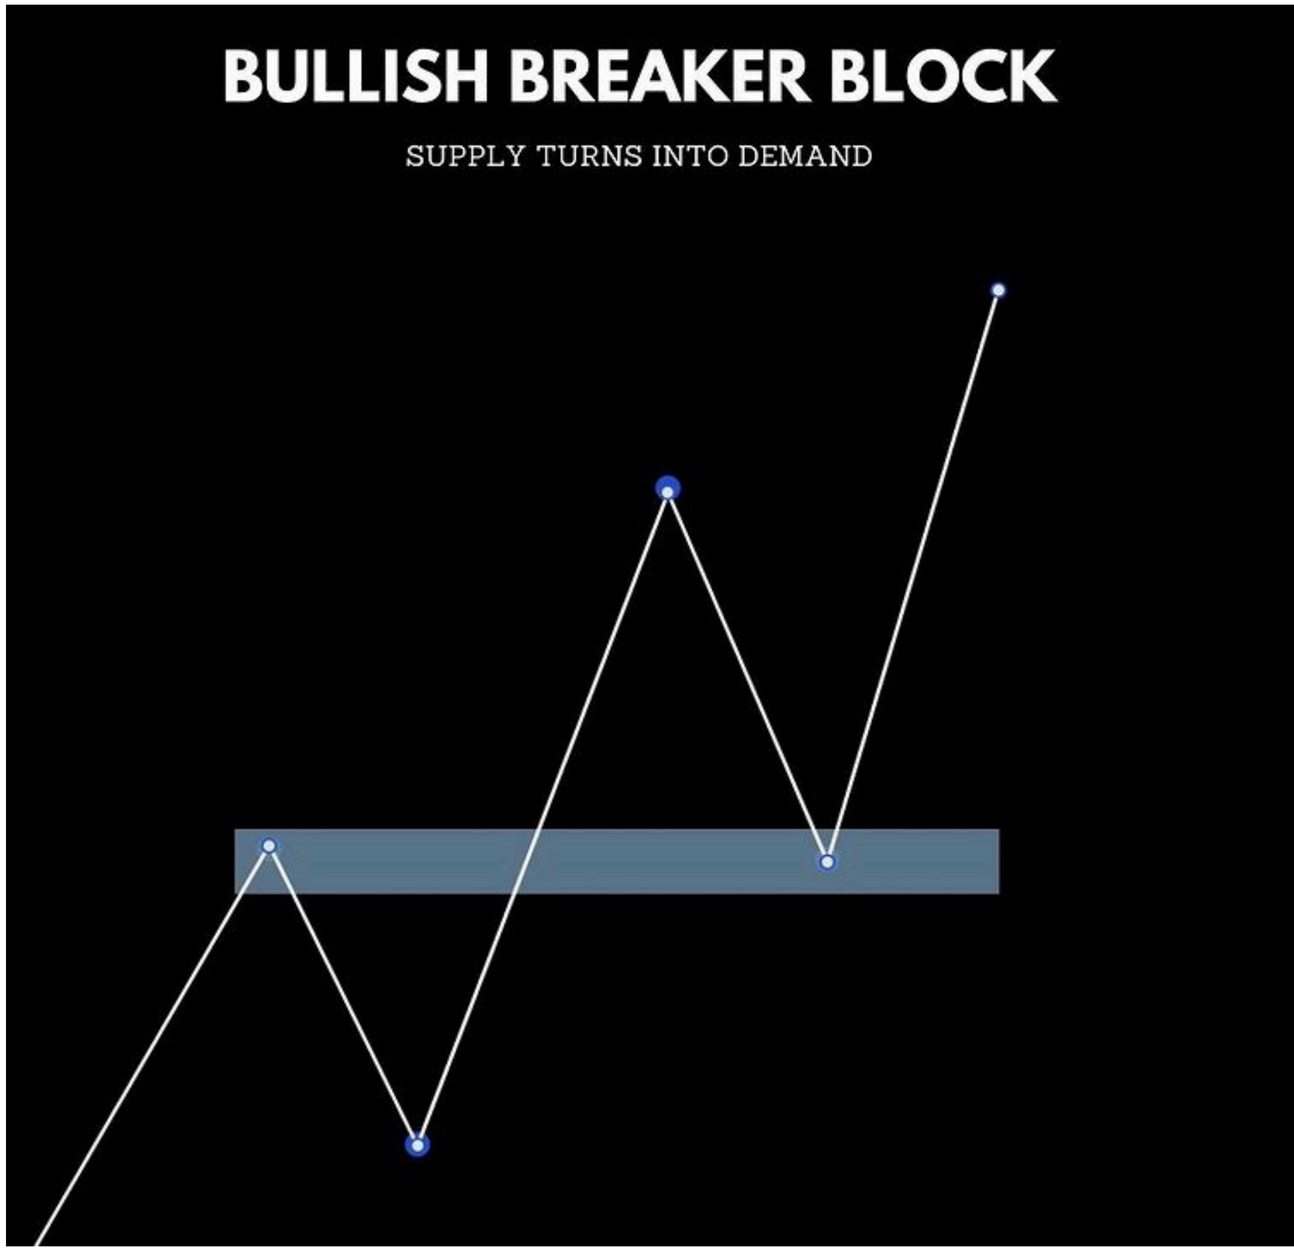

- DONT ignore spike delayers at any point unless a spike comes after.

- DONT hold till the supply or demand, after a spike close and wait for another opportunity on the same analysis

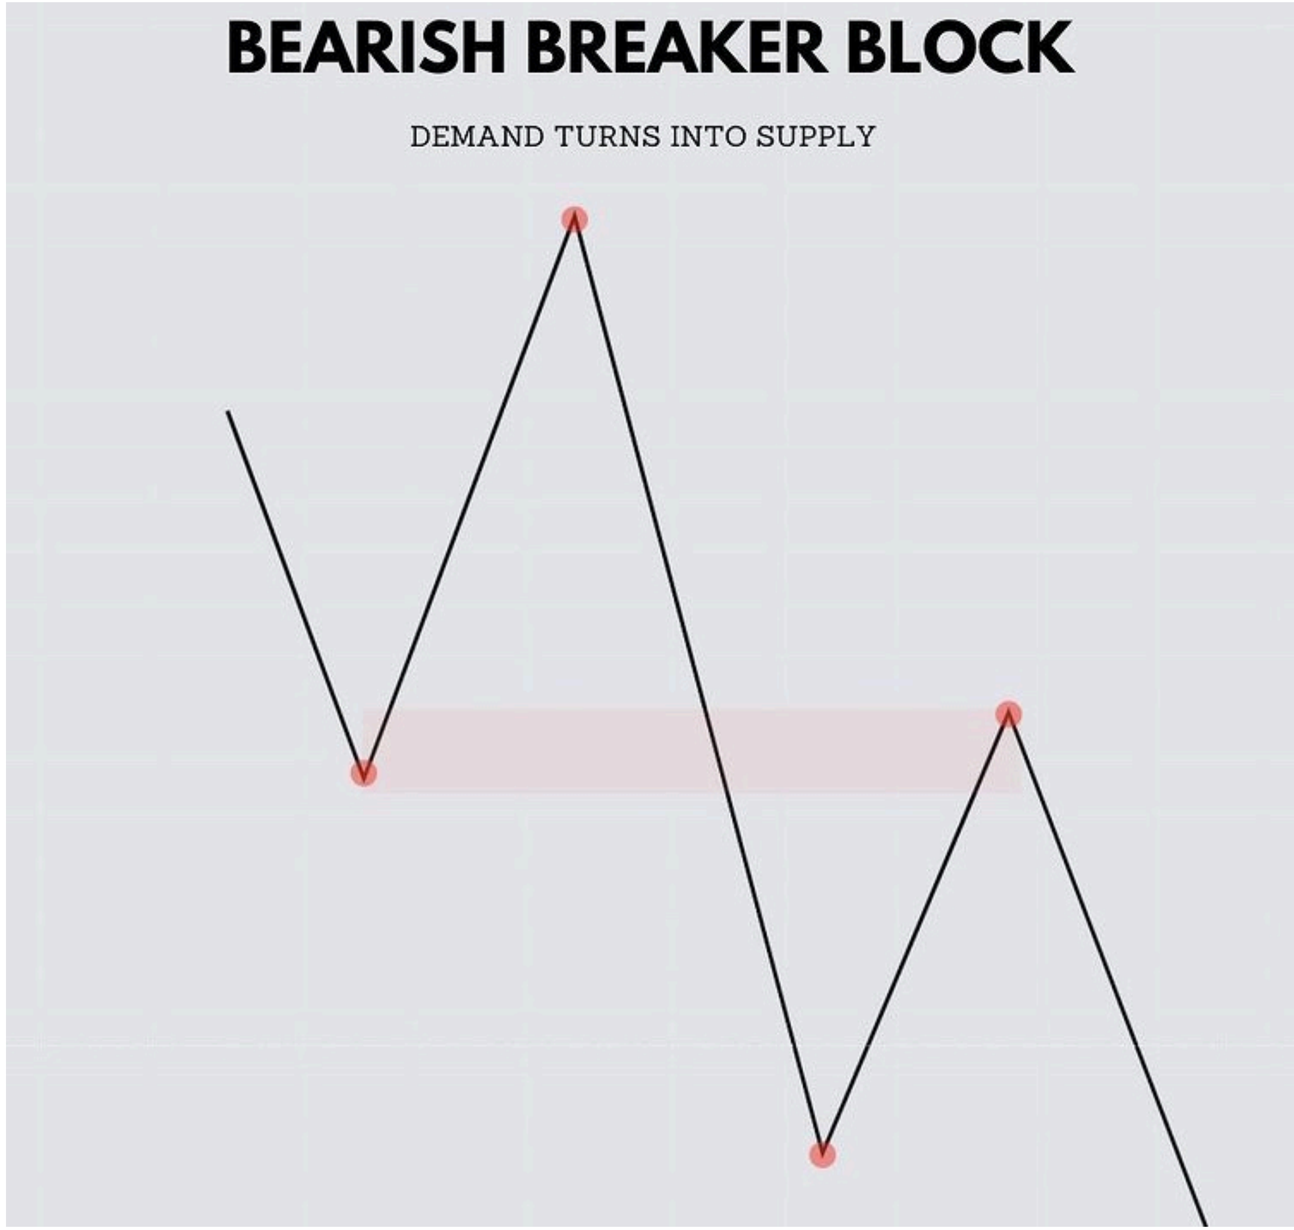

# BMM blocks

- ON supply zone , we look for heavy selling opportunities , but what happens if the market does not give us sells?
- That simply means that we must expect heavy buying opportunities to the upside
- The market always goes 2 ways only , it’s either we buy or sell.
- But for we have such patterns to alert you know if the Market is buying or selling.
- Bullish Breaker Block is mostly played out on our BOOM pairs.
- On Crash pairs , it indicates that the sellers are not yet in charge.

# BMM blocks

- Bearish Breaker Block.
- As explained in the previous page , we can take this as a continuation pattern to the downside.
- Take note , the market has to break the demand zone before we can even consider our sells and we enter only on a retest on the same demand zone.
- We need to wait for a confirmation that the market retested and now looking for selling opportunities
- This is mostly played out on Crash pairs.

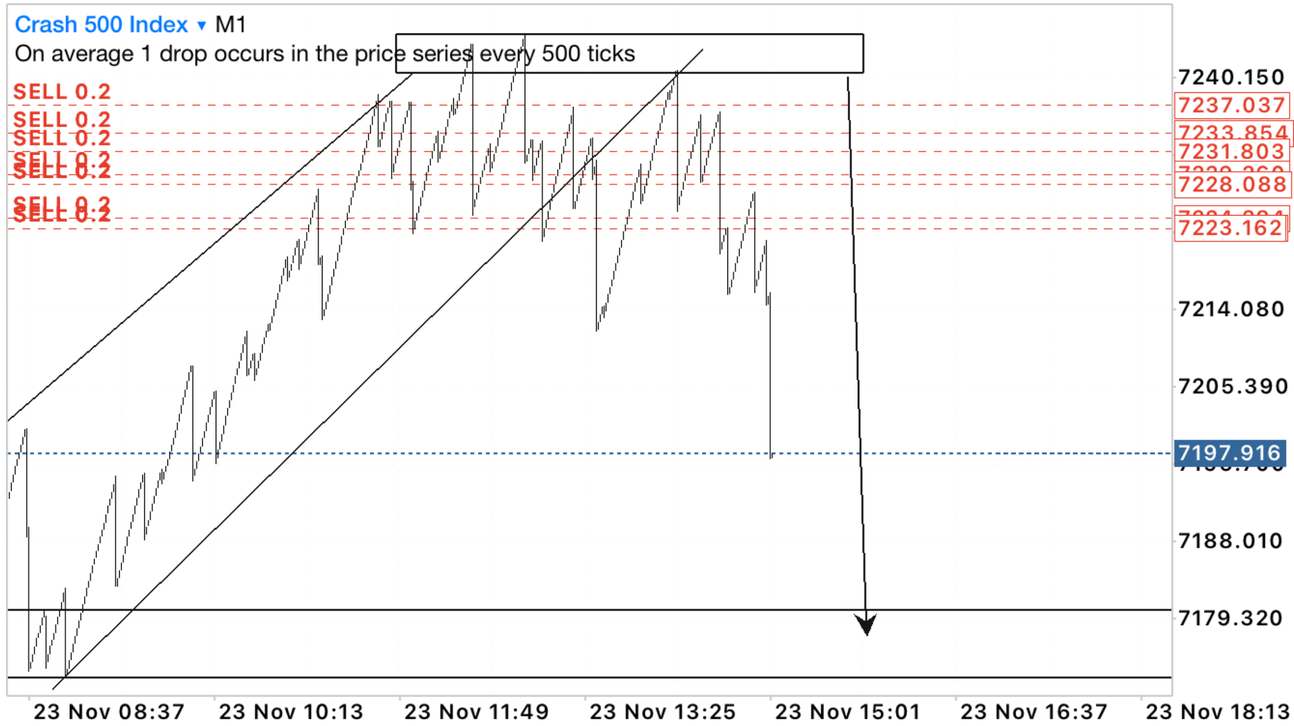

# BMM

- HELLO INVESTOR. Thank you so much for taking your time to read this pdf. I pray and hope that you will read this PDF 20 times as you keep on practicing. I know you've been seeking for something to keep you up and give you hope in your trading journey. I Buhle Mpho Makhobokoana will forever appreciate you for trying and for not giving up. It's been a tough journey for me and I wouldn't have done it without you because you've always looked up to me and you trusted me with the knowledge I've gathered for the past years . One thing that can make us all profitable is discipline.

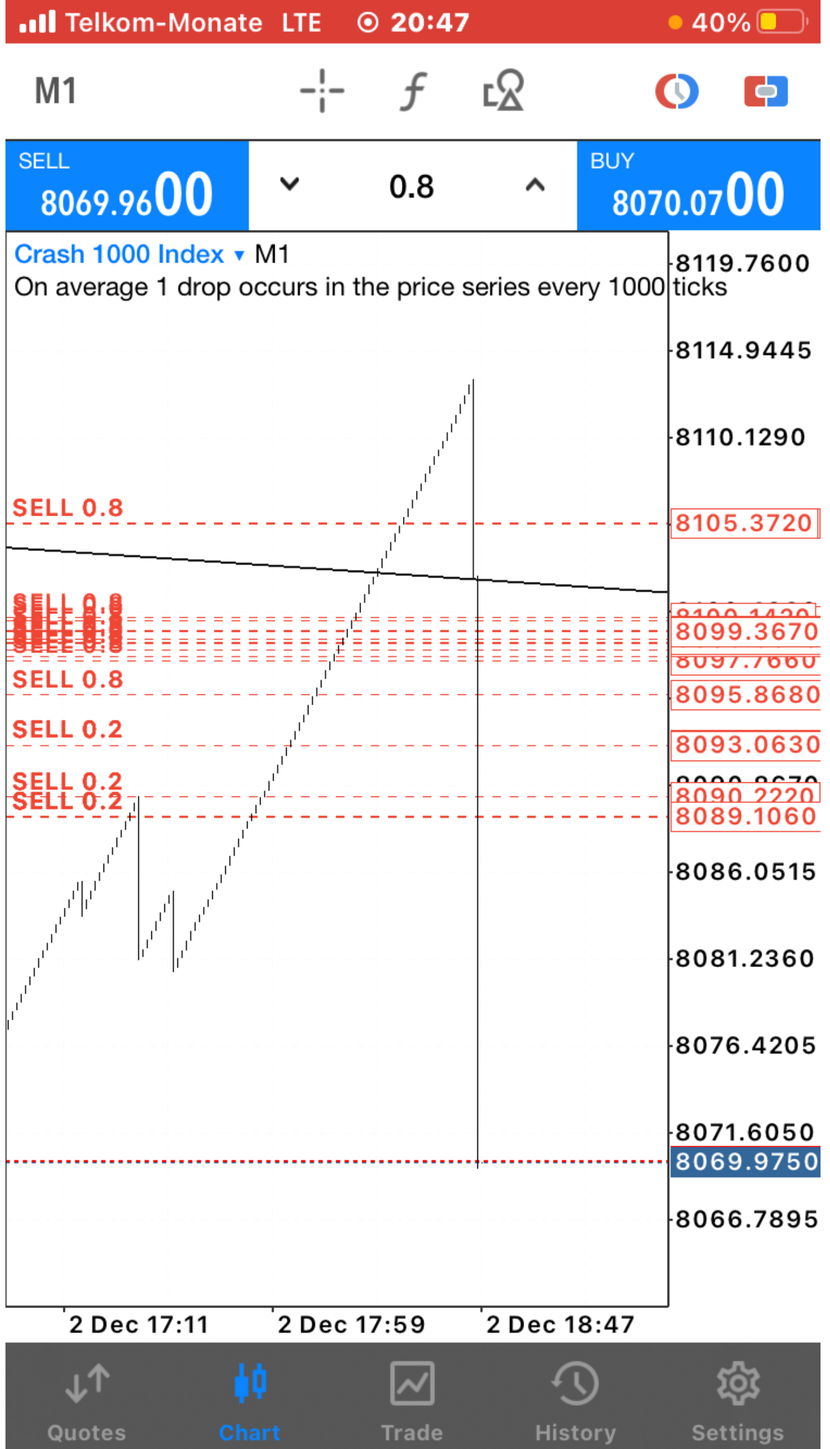

- Kindly don’t forget to always stick to the strategy , regardless of the losses and the outcomes.
- Don’t forget , SUPPLY AND DEMAND
- DONT forget, trendline between your SUPPLY AND DEMAND
- DONT forget , wait for your break out and confirmations
- Don’t ignore your spike delayers
- Don’t forget to be patient

# Patience

- Patience plays a major role when it comes to BOOM & CRASH.
- Trust your analysis at all times and learn from it.
- Just because you had a bad trading day , it doesn't make the strategy bad.
- On your Good days , don't be afraid to take 100 trades a day.
- On your bad days , don't feel left behind.

# Trading Plan

- DAILY target is very important. My target is $140 a day , that’s equals to $4200 a month , that’s like R62000 in South Africa.
- Start small , keep your progress and track your journey.
- Journal your trades and set rules.
- Avoid FOMO at all times , don’t trade because you saw me posting $1000 profits a day. Our journeys will never be the same. If you made your daily target don’t take trades anymore.
- If you can discipline yourself for 1 month , calculate how much will you make if you discipline yourself for 6 months.

“Never give up”

**–dr.Ivyson**
