HOW TO TRADE EVEN/ODD METHOD 2 BY **MR. BLUEPIPS**

Apart from the even odd analysis where we use circles we have another analysis though not that reliable but you can use where you not getting what you want in the circles analysis tool.

In this technical analysis we use two indicators

- **The moving average**
- **The stochastic momentum index**

HOW TO TRADE USING THE INDICATORS

Well looking at the two indicators at the bottom end of the candlesticks there are three things you will observe

1. **A red line that's MA**
2. **A white line**
3. **A white shadow (the most important)**

HOW TO TRADE EVEN CONTRACT USING THIS 3 THINGS

Firstly on even contract using this strategy make sure the trend is bearish (a red candle)

When white line forms shadow below red line trade even (a clear shadow should be formed and note that the red line should be outside the shadow and should not touch the shadow when it starts to touch it stop the bot since the market may not be safe)

HOW TO TRADE ODD CONTRACT

Again on odd contract the trend should be burish (a green candle)

When white line forms shadow above red line trade odd (a clear shadow should be formed and note that the red line should be outside the shadow and should not touch the shadow when it starts to touch it stop the bot since the market may not be safe)

- **Back test it on demo account until you are satisfied to go real**
- **Make sure you have a stable internet connection**
- **Use proper risk management**
- **Don't over trade on it max 5 runs.**
- **Trade on incotab, clear browser cookies (history) and always refresh to avoid bot delay or manipulation.**
