

Free EA with myfxbook result
https://t.me/dailyfxea

Thank you for choosing Forex Robotron, the ultimate automated forex trading solution for the, EURAUD, EURCAD, EURCHF, EURGBP, GBPAUD, USDCHF, USDCAD 5 minute charts!
This guide wil help you get setup and running in just 5 minutes. If you have any

questions please email support@forexrobotron.com

Account Activation

Befor
you start using Forex Robotron on your ac
count(s) you need to email

support@forexrobotron.com with your MetaTrader account number(s) along with your transaction id so that we can authorize and activate your account
to use Forex Robotron. Once we have received your request we aim to activate your account number for you to use Forex Robotron on your MetaTrader account within 24 hours. You will receive an email with your license number once authorization is complete and you wil then be able to use

Forex Robotron on your account. Each mt4 account requires a unique license number.
Please contact us if you wish to change the mt4 account number or if you need additional license(s).

Trading Hour

Forex Robotron trades 21-22 GMT when USA DST is on (i.e. summer) and 22-23 When USA DST is off (i.e. winter). You do not need to adjust the hours during summer or winter, the hours are already set for you and GMT is automatical y

calculated by the EA.
These are by far the best trading hours for Forex Robotron based on historical testing over many years, they produce enough trades with high accuracy. It is not necessary to over trade for long term results.
You only need to have your mt4 terminal running at these hours or outside these
hours if there are open trades for Forex Robotron to manage. If you want

to back test Robotron in the strategy tester then you wil need to use GMT data with DST auto offset or adjust the trading hours for your brokers historical data (ONLY for back testing). You can use Birts Tick Data Suite for this.

Broker Trading Accounts

A forex broker alows you to open trading accounts and trade forex through

the internet using a trading platform such as MetaTrader 4. You can trade on a demo account to begin with and move over to a live account when you are ready. There are many forex brokers to choose from and before you begin trading, be sure your broker meets certain criteria. They should provide low spreads, low commissions, fast execution and no limitations on stops. A broker with a good trading environment can give you fast execution, little slippage,

tight stops and tight spreads. One of the best forex brokers to open an account with is AvaTrade. They provide amongst the best possible conditions for forex expert advisors.

If you are already familiar with Meta Trader and have it installed on your computer, you can skip this section. If not, then please thoroughly read this

section for instructions on how to instal the Meta Trader trading platform and how to activate the robot.
Click here to download the free Meta Trader trading platform which we will use to run the robot. You wil need to open a demo
or live account to gain

access to the Meta Trader 4 download.
After you have downloaded Meta Trader 4, fol owed the setup instructions and the instal ation is complete, launch Meta Trader 4.
When you launch Meta Trader you can login to your demo or real account. Click
file – login and then enter your Meta Trader 4
account details.

Forex Robotron mt4 Setup

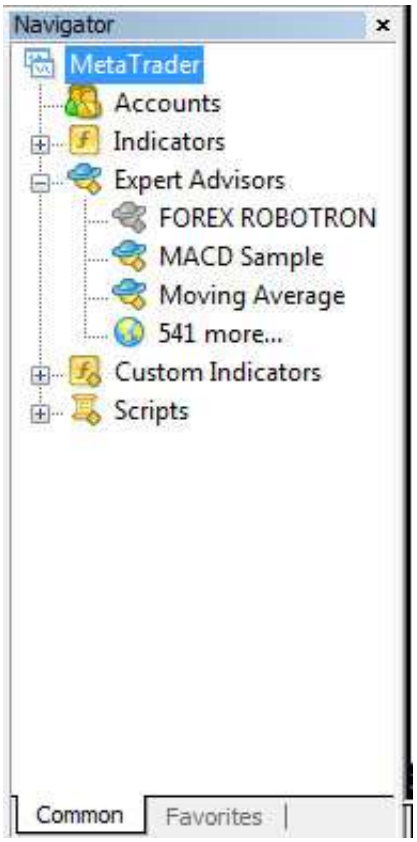

In order to attach Forex Robotron to your EURAUD, EURCAD, EURCHF,

EURGBP, GBPAUD, USDCHF, USDCAD charts within MetaTrader 4, you wil need to place the required files into the correct folder of the MetaTrader 4 instal ation directory. This section will describe where you should place the files ready for use. Please ensure you restart MetaTrader 4 after moving the files so that they will appear in the navigator window of the client terminal.

• First locate the Forex Robotron (ex4) file on your computer. Once located, move the Forex Robotron (ex4) file into the “experts” folder of the MetaTrader 4 directory. To find this directory, go to the mt4 terminal and click file from the top left hand corner and then click “open data folder”. From the data folder that has opened you must navigate to “MQL4”. Move the Forex Robotron (ex4) file into the “experts” folder. Restart the mt4 terminal. You should now see Forex Robotron in the

“expert advisors” drop down menu of the navigator window within mt4. If you cannot see the navigator window load it from the main menu in MetaTrader by selecting the “view” drop down menu.

Copyright (c) www.forexrobotron.com

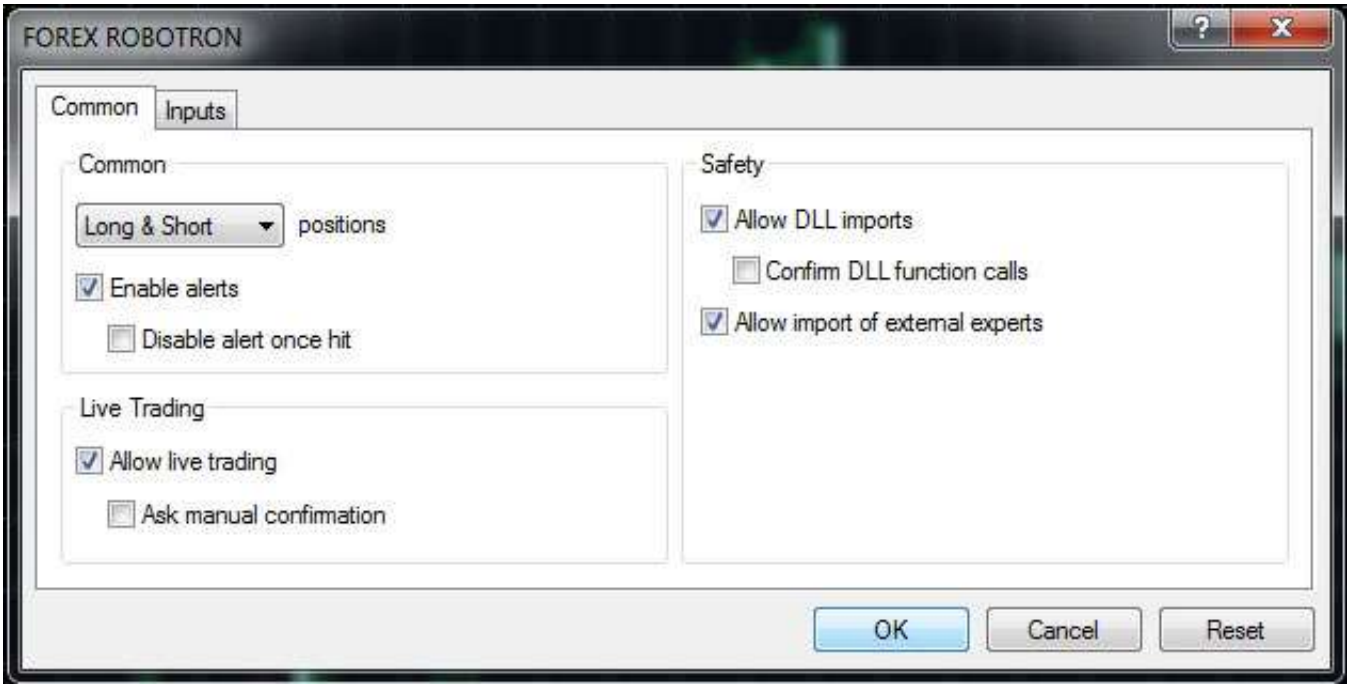

• You now need to open the USDCHF chart to run Forex Robotron on. Choose the USDCHF symbol and right click it then select “chart window” to open a chart for that currency pair. Change the timeframe of the chart to m5 (5 minute chart) by right clicking the chart and selecting periodicity.

• You are now ready to attach Forex Robotron to the chart. Drag and drop www.FXSA.me www.FXSA.me www.FXSA.me
Forex Robotron from the navigator window onto the chart. You wil be displayed with a window. This window is where you set common expert advisor properties and the unique input settings of Forex Robotron. In the common tab you need to enable Forex Robotron. To do so, tick the boxes: “enable alerts”, “allow live trading”, “al ow DLL imports” and “al ow import of external experts”.

Copyright (c) www.forexrobotron.com

• Now click the “inputs” tab and choose your lot or risk size and enter your license number.

• If you have set the common setting of expert advisors correctly then a smiley face wil appear in the right hand corner which means that Forex Robotron is active on that chart. Double check the chart is on the 5 minute timeframe and that there are no errors in the experts tab of the

terminal window. If you have clicked “ok” and have a sad face displayed in the top right hand corner of the chart, this means that expert advisors are not enabled (Forex Robotron wil not trade). To enable expert advisors, click the “expert advisors” button which is normal y located near to the top of the trading platform. You may also need to navigate to “tools” from the mt4 top menu and select “options” then in the expert advisors tab ensure you have only checked the tick box for “al ow automated trading” and “al ow dl imports”. Forex Robotron is now analysing the market and wil place/manage trades ful y automated – just make sure that you leave the MetaTrader platform running on your computer or VPS.

• Repeat this process for the currency pairs you wish to trade.

Forex Robotron Input Parameters

So far you have instaled the MetaTrader 4 trading platform, logged into your trading account and placed the Forex Robotron files into the correct folders. You have loaded up the charts to run Forex Robotron on and selected the m5 timeframe. Experts have been enabled and you have set the risk or lot size and license number in the Forex Robotron input settings.
In this section we wil look at the different input parameters of Forex Robotron

in detail so you can gain on understanding of what each does and change them should you require. This is also useful information for those who wish to optimize Forex Robotron by testing different combinations of the input parameters.
• **Robot Name** – Name used for Forex Robotron in trading terminal. This is the name displayed in the comments of the "trade" and "account

history".
• **License Number** – You need to enter your unique license number for your MetaTrader 4 account. If you have not received your license number yet or want to change to a different account, please email support@forexrobotron.com with your mt4 account number.
• **Max Spread** – Maximum spread. Forex Robotron will not trade if the

current broker spread for the currency pair is greater than this value (the spread can be equal to this value).
• **Max Slippage** – Maximum slippage. Slippage is the difference between the quoted price and the actual price the trade is entered. Forex Robotron wil not trade if the price has moved greater than this value (slippage can be equal to this value).

• **Hour Start** – GMT Hour Forex Robotron begins.
• **Hour End** – GMT Hour Forex Robotron stops trading. There can be trades that are stil open after these hours so keep your MetaTrader 4 terminal running at al times on your computer or VPS so the EA wil manage these trades for you.
• **Lots** – If you set risk to false then you must set fixed lot size here instead. Make sure that you use a sensible lot size fo
r your account balance

Copyright (c) www.forexrobotron.com

• **Risk %**– % of free margin to risk per trade. The risk % is calculated by dividing the free margin by 100 and then multiplying this figure by the risk. This gives us the amount in $ value that we wil risk for the trade so we divide that by the stop loss which gives as the value per lot. The

actual ful risk is not always lost as you will find out more about from the stop loss explanation below.

• **Minutes Sleep** – How many minutes the EA will sleep after a losing trade. This is to avoid consecutive losing trades. Set to 0 to disable.
• **Stop Loss** – Stop Loss distance from entry. Forex Robotron uses a fixed "safety" stop loss which is not always hit as the indicators used will

usual y close the trade for a win or loss before hand. This has the advantage that you do not actual y lose the ful risk per trade, so you wil actual y lose less than expected some of the time.
• **Take Profit** – Take Profit target. Forex Robotron wil usual y close out a trade using the built in indicators as this al ows for a more flexible and less rigid approach to trading.

• **Trade Friday –** Set to true if you want to trade Friday. This is advised to be left false due to potential big weekend gaps that can cause big losses.
• **Trade Sunday –** Set to true if you want to trade Sunday. You may want to set to false if your broker has high spreads at the Sunday open.
• **Trade Short –** Set to true if you want the EA to place sell trades – NOT recommended.

• **Trade Long –** Set to true if you want to the EA to place buy trades (default).

Set-Up Complete!

You are now hopeful y set up and running Forex Robotron on your 5 minute charts! If you get stuck at any point or did not understand something then please contact support@forexrobotron.com – we are very friendly and here to help.

Back Testing

If you want to back test Forex Robotron, you must test with real tick data, real spreads, real slippage and commissions. You can use Birt's Tick Data Suite for tick testing in MetaTrader4 if required. You wil need to do this if you want to verify for yourself the results on the Forex Robotron website. You wil not be able to duplicate the results by using the data downloaded in MetaTrader 4 from Meta Quotes because this is not accurate tick data, does not use real spreads, does not include commissions, does not have any slippage features

and is not GMT al year round with DST. GMT offset for the start and hours must be adjusted according to your broker data timezone when back testing.

Contact

If you need support please email: support@forexrobotron.com. We will aim to reply to you within 24 hours (excluding weekends). Please be patient and do not send hundreds of emails, as soon as your email is read, it is replied to.
