
MARK BET'S BINARY
TRADING STRATEGIES

DISCLAIMER

THE STRATEGIES DEMONSTRATED ON THIS DOCUMENT ARE AS A RESULT OF MY OWN PERSONAL ANALYSIS AND RESEARCH. KEEP IN MIND NOT EVERY STRATEGY WORKS THE SAME WAY FOR EACH INDIVIDUAL AND THE ONE'S I HAVE DISPLAYED ARE WHAT ARE BEST ON MY SIDE.

!!!!!!DO NOT APPLY ANY NEWLY OBTAINED STRATEGIES ON YOUR REAL ACCOUNT WITHOUT PROPER PRACTICE AND PERFECTION!!!!!!!

THAT'S WHAT YOUR DEMO ACCOUNT IS FOR. AND REMEMBER TO ALWAYS PRACRICE GOOD RISK MANAGEMENT.

INTRODUCTION

Hello good people my name is Mark Bet, I'm a Deriv binary trader. I started in the year 2023. I've been on this broker for just a few months and I've already started securing some profits. I had no plan of writing this document but I decided to create it for the purpose of aiding those new to binary trading and the prominent guys too. Learning never stops right?

Well straight to business what is Deriv binary trading? On a quick google search it would be defined as a global online trading broker for Forex commodities and other financial markets. That's the textbook definition, but to me Deriv is financial freedom due to the flexible working hours and unlimited earnings, though there's a withdraw limit of ten thousand dollars for unverified users (unverified address to be exact) but I'm sure that's a problem we all would like to have.

Now that we have the definition down let's get to the point of this document.I'll be dictating how to trade on the over/under, even/odd and matches/differs digits trade type, rise/fall and the high/low tick trade type. There are a few trade types on the Deriv broker but I have majored on these after a lot of research and practice. With a working strategy you can pulverize the market with minimal losses and major profits.

Binary Bet

BABY STEPS

First let's start with some beginner tasks like loading the bot

1. Login to your account

2. Click on traders hub on the menu

3. Select Deriv bot

4. Click on local

5. Depending on the location of your bot, select the bot that has been sent to you.

Most of the time it's under Whats App documents or under downloads if you received it via email.

Indicators

Indicators can be accessed and added to the charts via deriv trading view, I've dictated how to load the indicators to the charts so read on.

Indicators are more of guidelines on your decisions when trading. You CAN'T TRADE off of indicators.

These are the functions of these indicators according to how I use them.

PS: you don't really need indicators for you to analyse the market accurately nor to execute your trades. But you can use them as your niche on trades if you need to.

Commodity channel index [CCI]

The function of the CCI is to check the market stability.

How to observe it before making your decision

1. The CCI is on multiple bends= unstable market

2. The CCI is on minimal bends= market is good to trade with

3. The CCI has no bends and is pointing on one definite direction= The market is completely stable at the moment

MACD

The macd is used to determine whether the candle is strong enough to trade with.

What do you look for?

Binary Bet

The macd should display a strong coloured candle, whether green/red it should be strong coloured and not faded.

Donchian channel [DC]

The Dc is used to determine the trend on the market mostly.

Binary Bet

OVER/UNDER TRADING STRATEGY

OVER/UNDER TECHNICAL ANALYSIS

I have two strategies for trading over/under, this first one is mostly for short term trades; that means just a few runs. The second strategy can hold up a bit longer since you're looking at long term movements.

When trading over/under I would recommend using digits 3 for your over trade and digit 6 for your under trade. These two digits are what I like to refer as starting points on over/under. Once you have executed a few runs with these digits as your assets you can now advance to higher payout trades such as over 3/4/5/6/7 or under 5/4/3/2.

STRATEGY ONE

1. ANALYZING OVER AND UNDER MARKETS

When carrying out your technical analysis on over and under markets I recommend using Deriv trading view to conduct analysis. You can access Deriv trading view on your browser by simply doing a quick Google search. Since you're looking for short term trades, it's better to use small time frames, in this case two minutes.

Over 3

- Candle: Red momentum candle/ Green retesting candle.

How to confirm your trade. When trading over 3 just make sure the scale is producing more over numbers that's digits 4-9. (In short intervals a maximum of 3 digits in between each appearance)

Under 6

1. Candle, Green momentum candle/ Red retesting candle.

How to confirm your trade. When trading under 6 just make sure the scale is producing more under numbers that's digits 5-0. (In short intervals a maximum of 3 digits in between each appearance)

INDICATORS TO USE

First of all when carrying out analysis on this market using trading view I recommend using a candle chart instead of a line chart, in my opinion it's way more accurate with the trends.

A) DONCHIAN CHANNEL

How to access it:

- Open Deriv trading view
- Click on the *fx* button
- Type in donchian channel or simply DC and click on the display result

Binary Bet

Here you look at the trends. The trend can be determined by observing the donchian channel moving average [that's the yellow line in the middle].

So Candles forming above the donchian channel moving average=Uptrend=Under 6/5/4

So Candles forming below the donchian channel moving average= Downtrend= Over 3/4/5

B) COMMODITY CHANNEL INDEX

This is the second indicator we'll be using. How to access it:

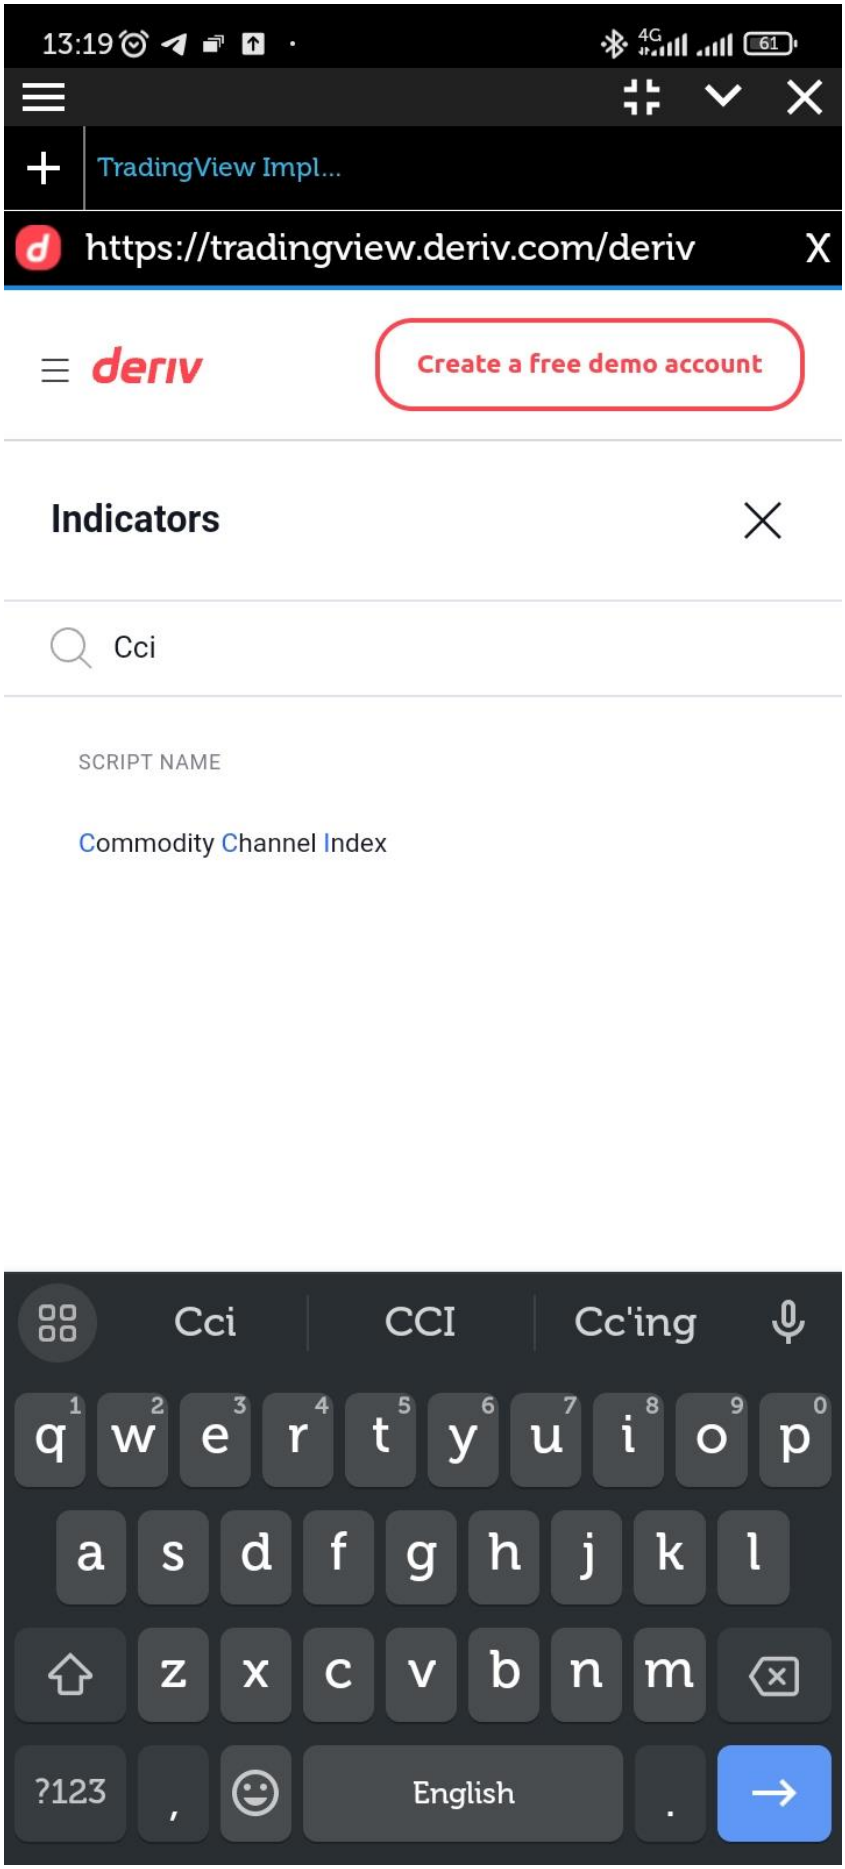

- Open Deriv trading view
- Click on the *fx* button
- Type in commodity channel index or simply CCI and click on the display result

There are no settings changes needed on this indicator for this specific strategy so you'll leave it as it is.
Just make sure the CCI is on one definite direction and in alignment with the DC trend.

So if the DC is showing an uptrend make sure the CCI is facing upwards with minimal bends

So if the DC is showing an downtrend make sure the CCI is facing downwards with minimal bends

C) MACD

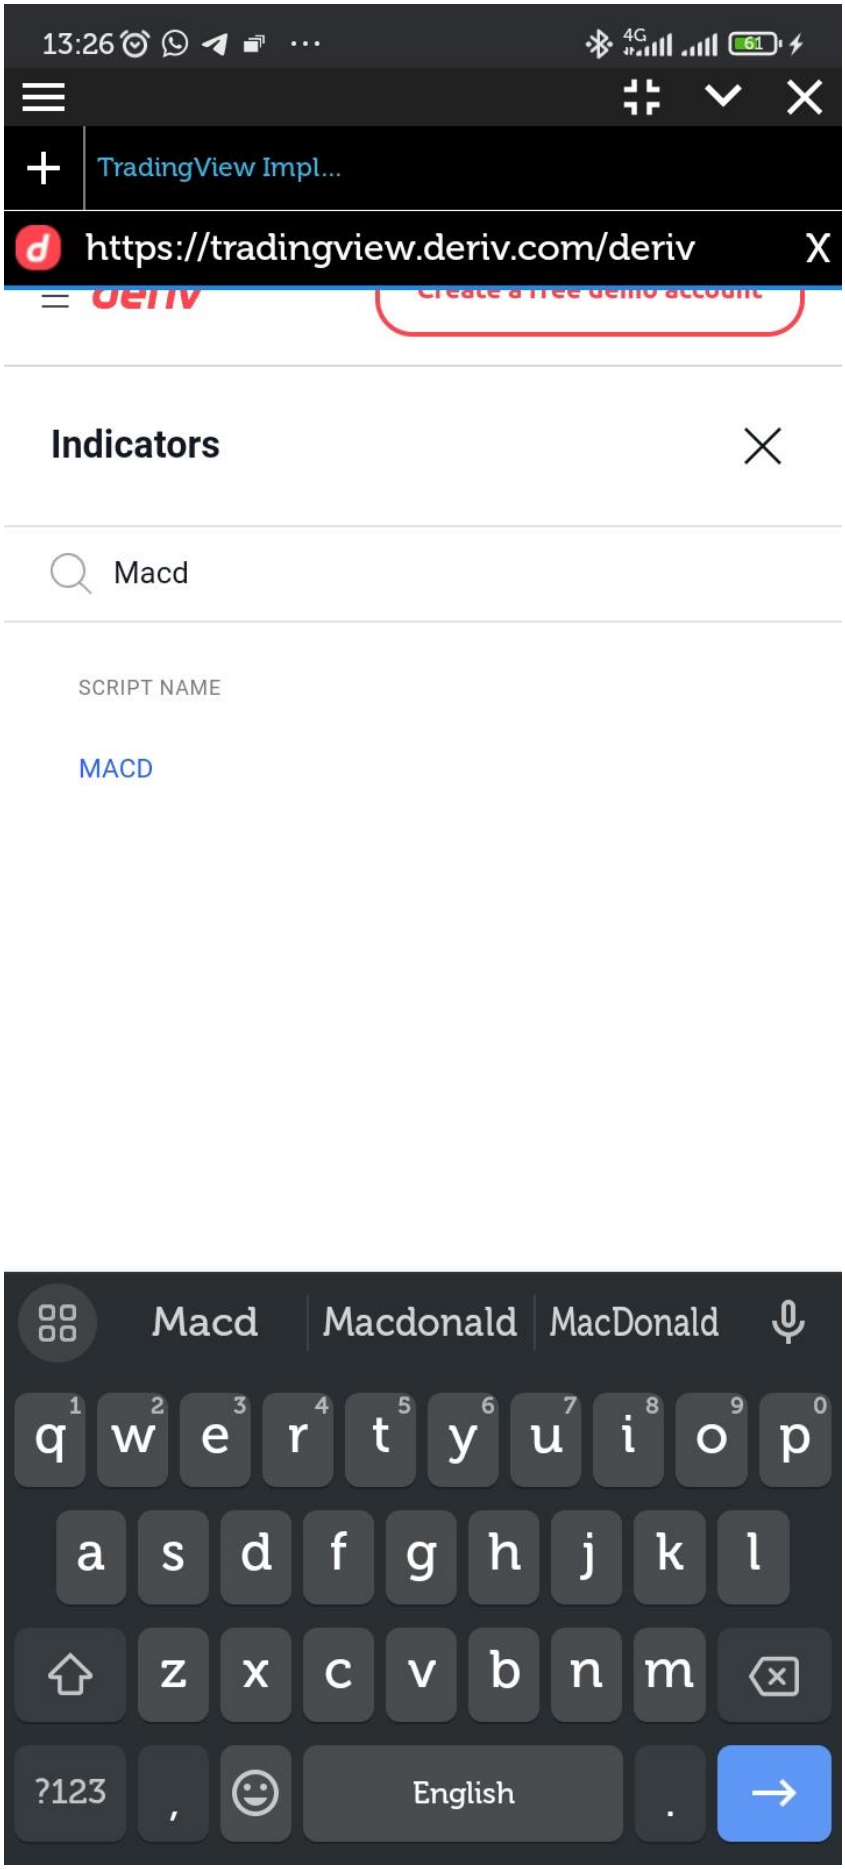

This is the third and final indicator on this strategy. How to access it:

- Open Deriv trading view
- Click on the *fx* button
- Type in MACD and click on the display result.

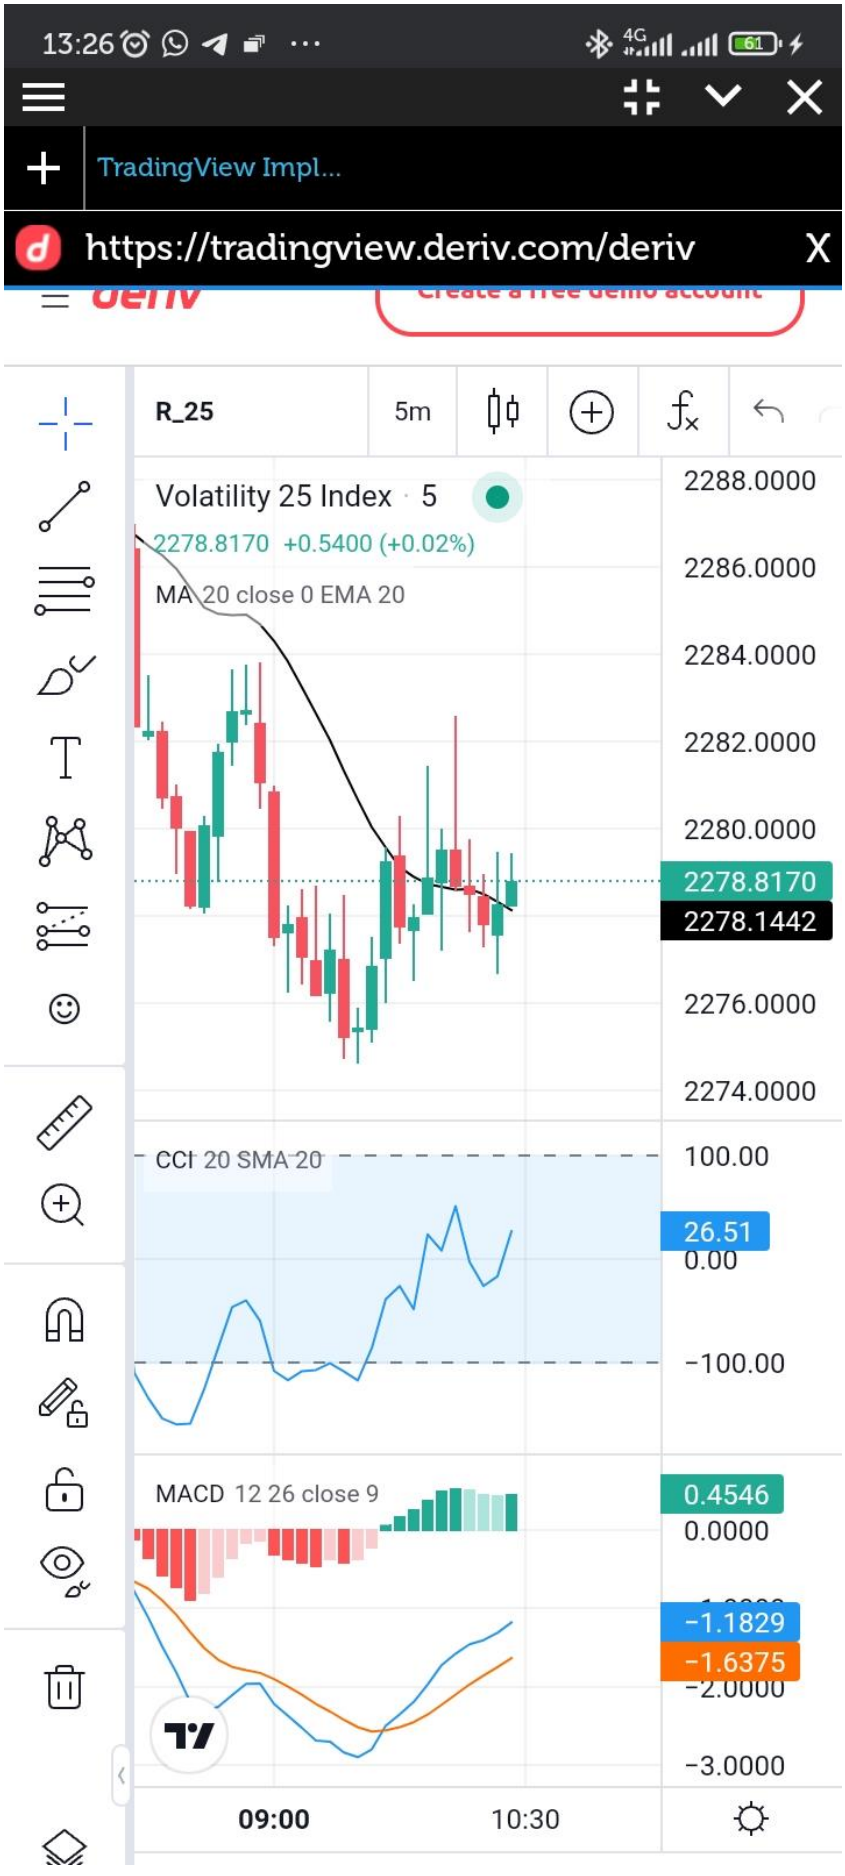

Just make sure the macd is displaying a strong coloured candle. And it's in alignment with the candle forming on the chart

So if it's a green candle forming macd=strong green

So if it's a red candle forming macd=strong red

Binary Bet

A tip for you guys when trading the digits trade type.

- The digits trade type can be listed among the most volatile trade types on the deriv broker. This means this type of trade type changes really quickly hence it's a good idea to be flexible on your contract types.
- What I mean is you can trade over on a green candle or a red candle and you can trade under on a green candle or a red one. It all depends on your analysis and strategy.
- You can be on point on everything and still take on losses, put God first and respect his will.

ENTRIES INTO THE MARKET

Now this part is the second most important part of any trade after technical analysis. Without good entries you can't execute successful trades.

1. Scale

Just use a 2:1 ratio.

So say on the scale the digits appearing are mostly over digits and you want to trade over 3.

The type of entries you'll use is two over digits consecutively eg. 4,6 or an over under over type of appearance eg 4.3.5

Apply the opposite on under six or any under prediction you're using.

I've got another entry involving using the scale but you'll have to seek me for that.

2. Candle movements.

Red/ Green momentum candle. Wait for a slight retest then when back on momentum run.

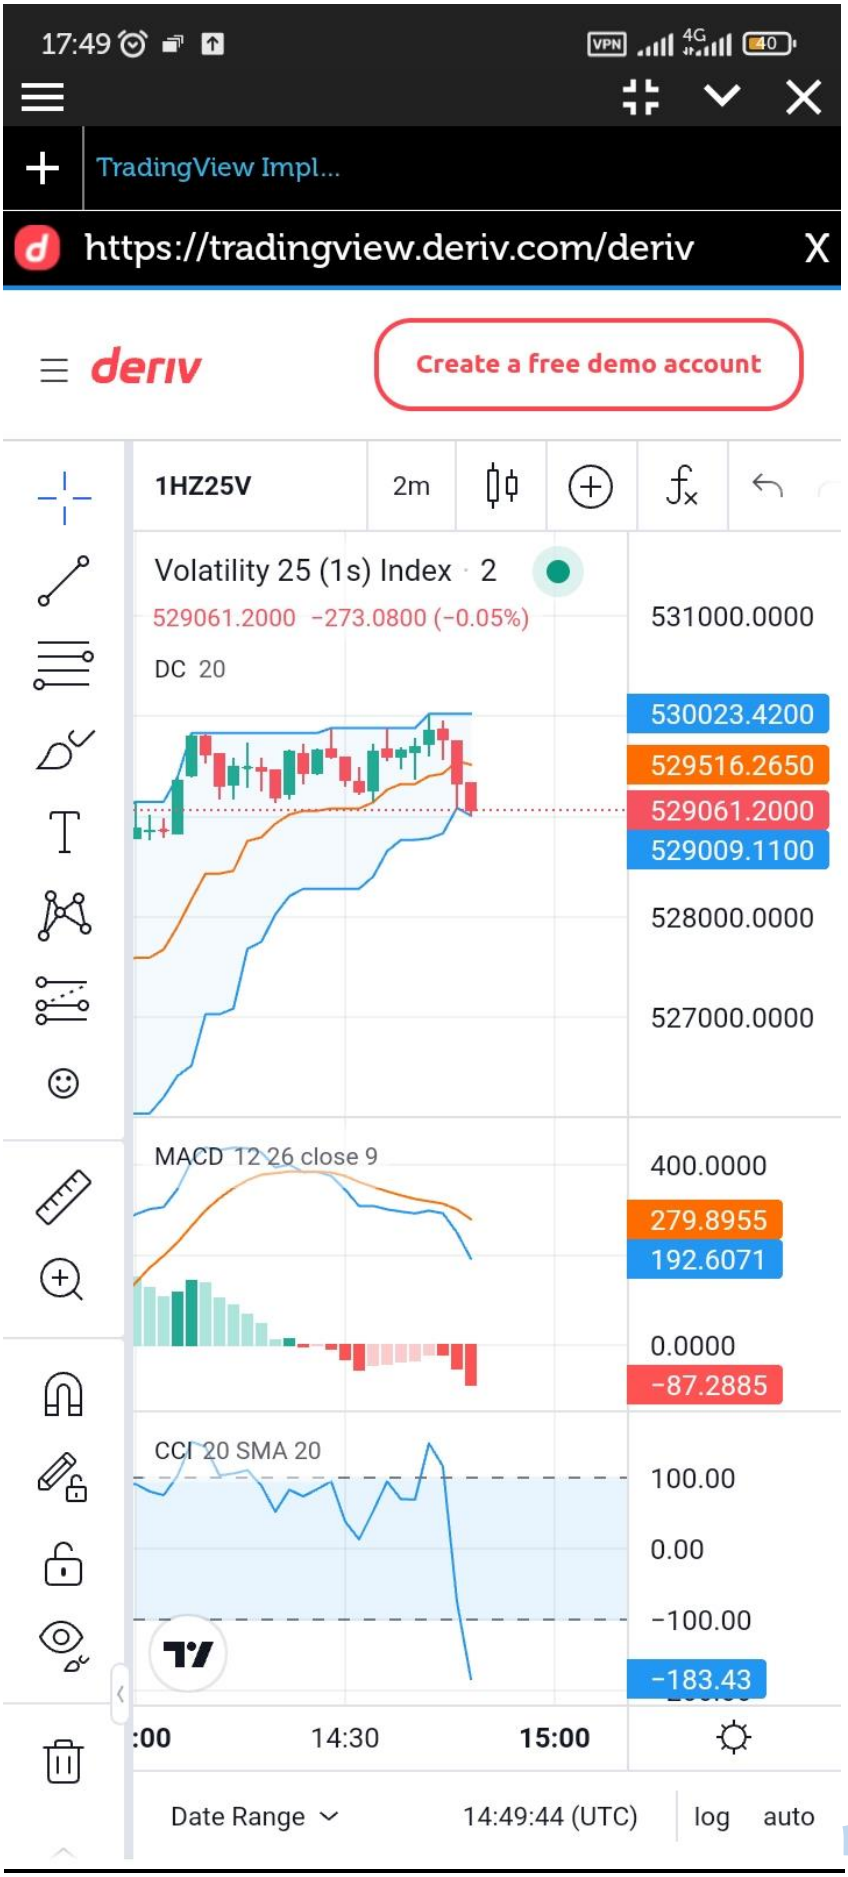

Green/Red retesting. Wait for momentum then when back on a retest run.

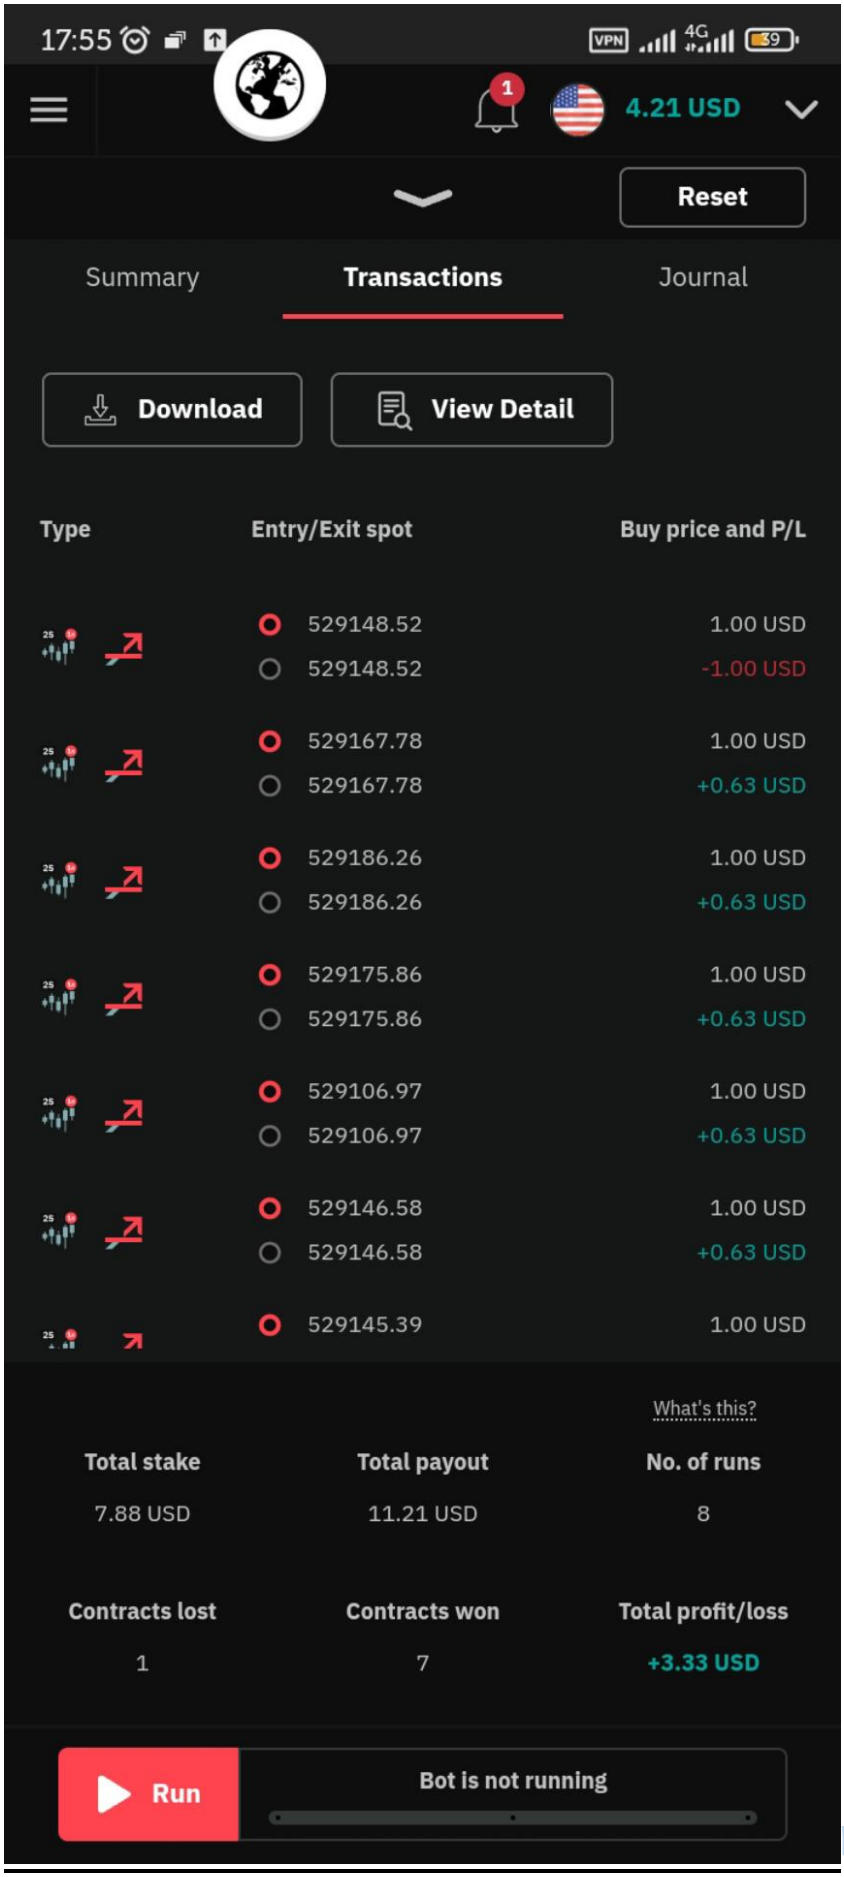

This entry depends on the contract type you're using, whether over/under.

ENTRIES GO HAND IN HAND WITH THE CONDITIONS SO MAKE SURE THE CONDITIONS FOR YOUR TRADE ARE MET BEFORE LOOKING FOR AN ENTRY.

STRATEGY TWO

This second strategy is a bit more accurate since you're looking at the long term movements of a market through the higher time frames. In this case analysis can be done on the 15 minute time frame then entries can be made using the five minute time frame. There are no indicators used on this one, but you do need to identify the support and resistance points.

Conditions

1. You need a trending market
2. On an uptrend mostly consider over trades and on a downtrend mostly consider under trades.

You can identify the trend based on the majority of the candle movements, use the 15 minute time frame for accuracy.
Your prediction when trading over/under depends on your level of confidence. You can trade using prediction 1-8 on either contract type.

Over trade

- When trading over you need a strong uptrend on the 15 minute time frame
- Make sure there are no indicators of a reversal on this time frame.
- Switch to the five minute time frame and make sure over digits are dominant on the scale

Under trade

- When trading over you need a strong downtrend on the 15 minute time frame
- Make sure there are no indicators of a reversal on this time frame.
- Switch to the five minute time frame and make sure under digits are dominant on the scale

Entries

Over

- The candle forming should be a green one on momentum. The conditions have to be met on the scale also
- Wait for the candle to retest then when it goes back on momentum run your bot.
- You can also use the scale with a basic 2;1 ratio to enter your trade.

There's another solid entry for over 6 on this strategy but it would be too much of a hustle to type it out, so seek me when you have the time.

Under

- The candle forming should be a red one on momentum. The conditions have to be met on the scale also
- Wait for the candle to retest then when it goes back on momentum run your bot.
- You can also use the scale with a basic 2;1 ratio to enter your trade.

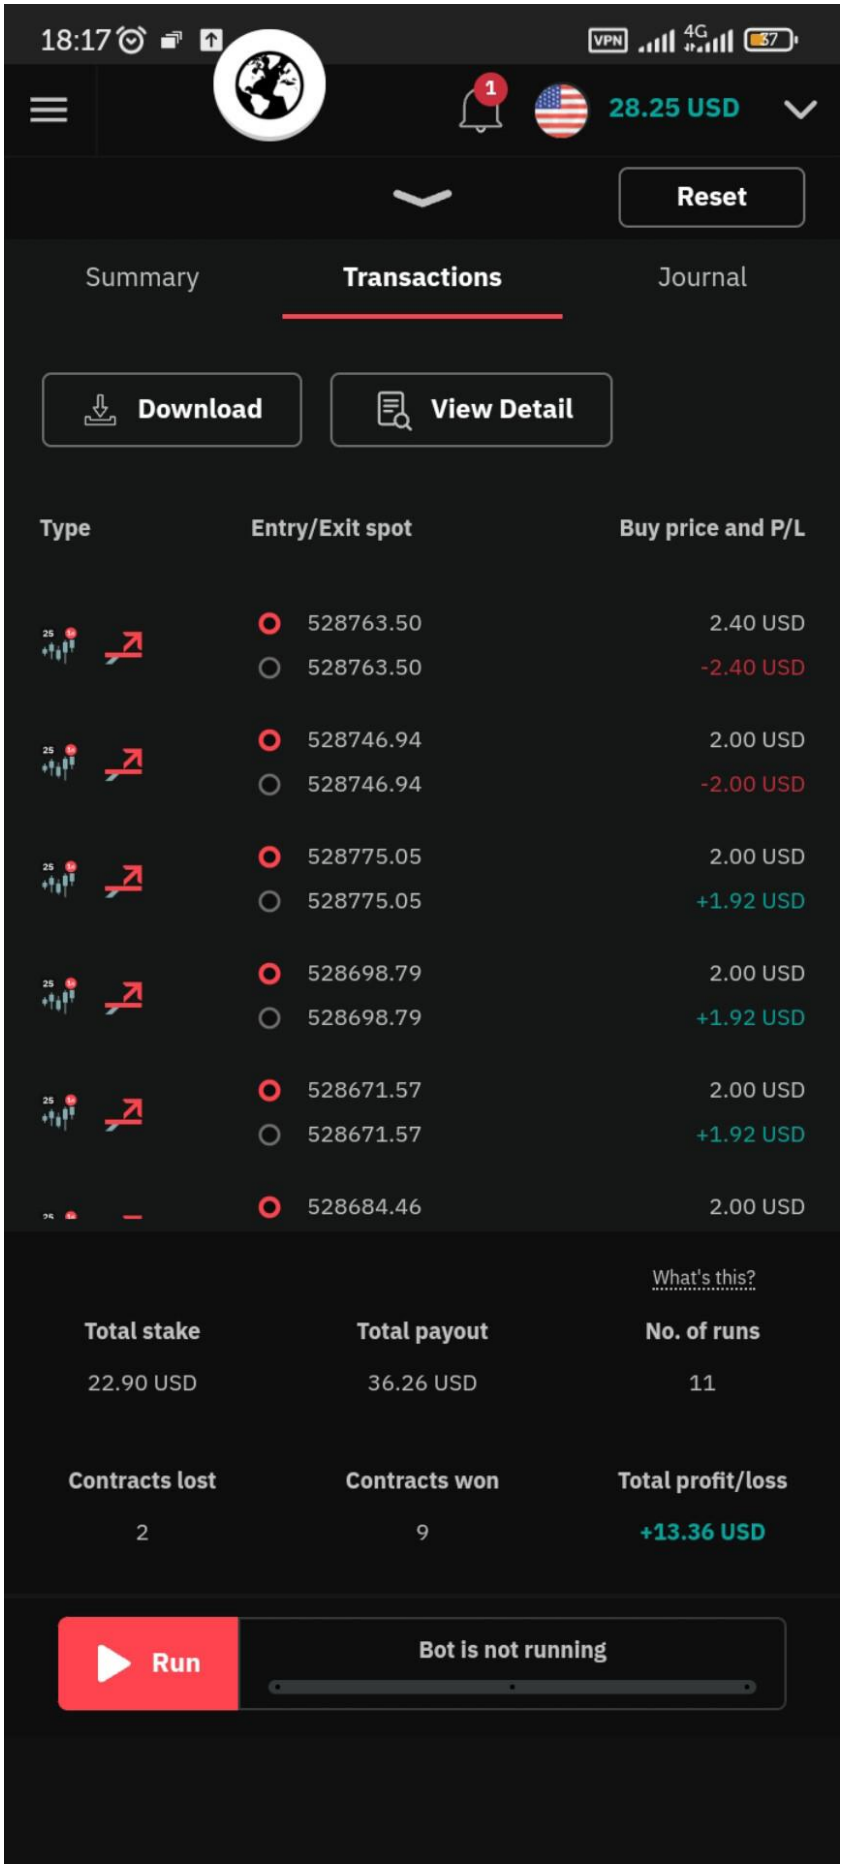

There's another solid entry for under 3 on this strategy but it would be too much of a hustle to type it out, so seek me when you have the time.

EVEN/ODD TRADING STRATEGY

On even/odd there are also two strategies.

STRATEGY ONE

Use three moving averages set them to exponential moving average (EMA)

Length settings

20

80

100

The trend can be determined with the positions of the candles in relation to the three moving averages. Candles above the moving averages=uptrend. Candles below the moving averages=downtrend.

Uptrend=Odd

Downtrend=Even

CONDITIONS

Even

1. You can trade even on a red candle on momentum or a green retesting candle. Provided it's not an Extreme RETESTING candle.

2. When trading even make sure even digits are the one's dominant on the scale. By this I mean appearing in short intervals. (Here you consider a maximum of 3 ticks/ 3 digits in between each appearance).

Odd

1. You can use a green momentum candle or a red retesting candle.

2. When trading odd make sure odd digits are the one's dominant on the scale. By this I mean appearing in short intervals. (Here you consider a maximum of 3 ticks/ 3 digits in between each appearance).

Entries

Even

Binary Bet

1. You can use a ratio entry preferably a 2:1 ratio on even when running your bot with contract even.

2. You can use the candle movements to enter your trade.

Red momentum. You'll wait for a slight retest(slight upward movement) then when the candle goes back on momentum (downward movement) you enter your trade.

Green retesting. You'll wait for a slight momentum (slight upward movement) then when candle goes back on a retest (downward movement) enter your trade at that point.

Odd

1. You can use a ratio entry preferably a 2:1 ratio on odd when running your bot with contract odd.

2. You can use the candle movements to enter your trade.

Green momentum. You'll wait for a slight retest(slight downward movement) then when the candle goes back on momentum (upward movement) you enter your trade with odd.

Red retesting. You'll wait for a slight momentum (slight downward movement) then when candle goes back on a retest (upward movement) enter your trade at that point. Odd

DON'T USE EXTREME RETESTING CANDLES WHEN MAKING YOUR TRADES.

THEY'LL HAVE REALLY LONG WHICKS.

Use three moving averages set them to exponential moving average (EMA)

Length settings

20

80

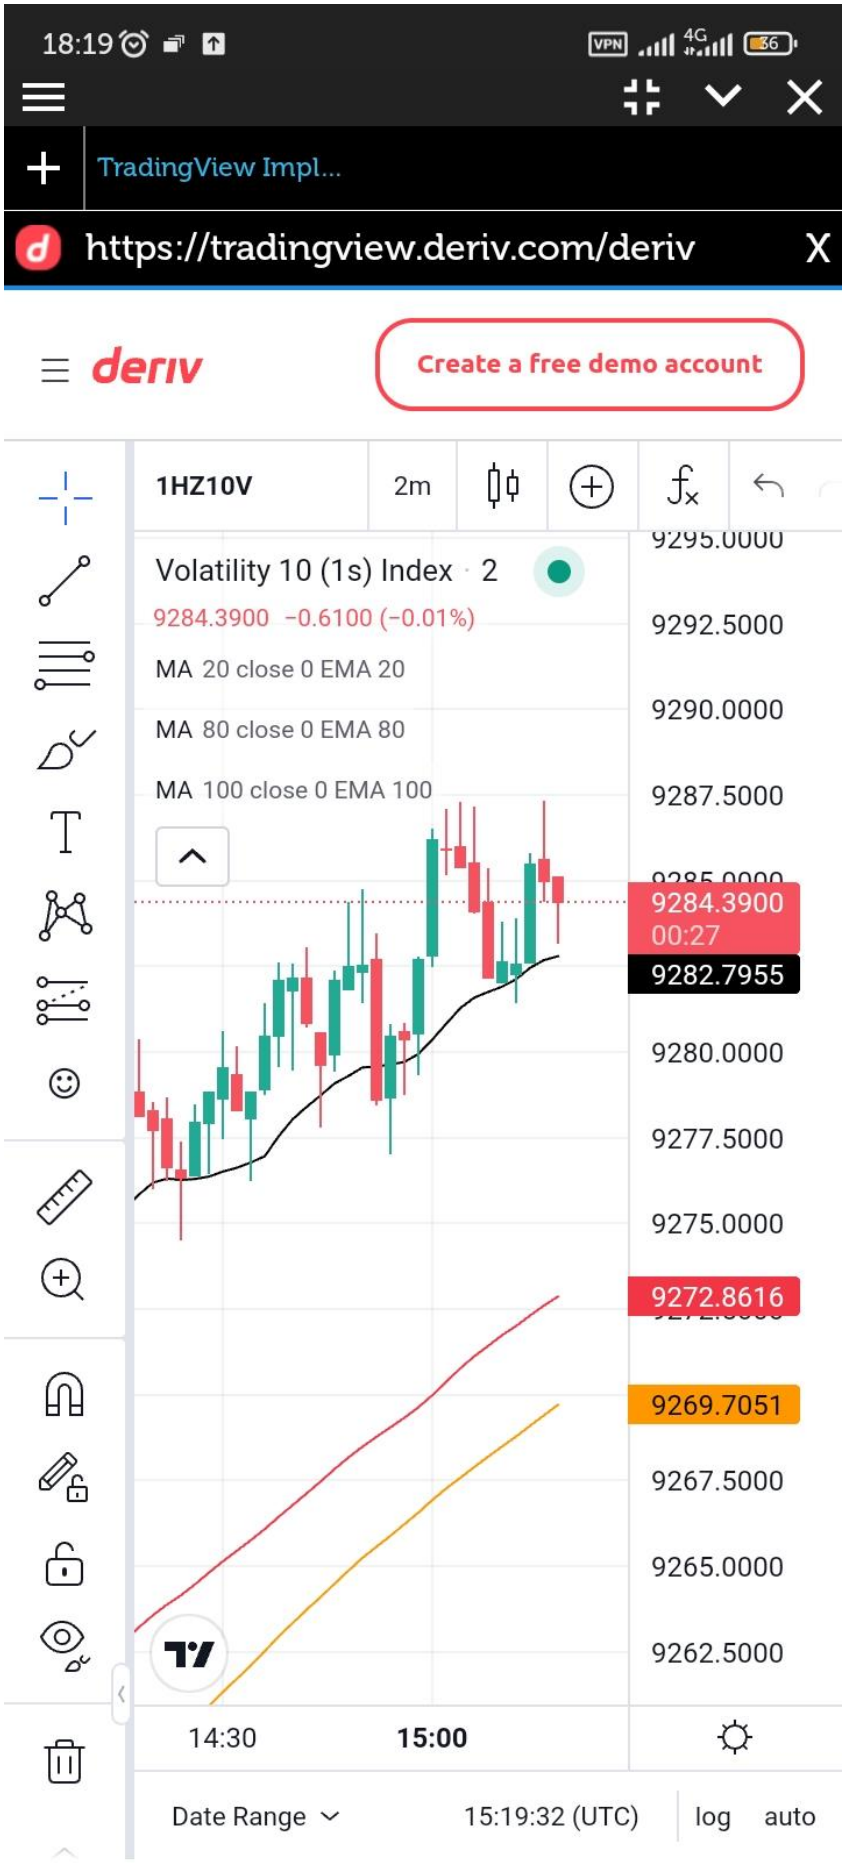

100

Binary Bet

STRATEGY TWO

On this strategy you're still using trends only you'll base your decision more on the candles. This strategy can facilitate up to twenty runs on your bot if the conditions are met, and you make the right entry.

Conditions

- ✧ There has to be a clear trend on the charts using the fifteen minute time frame.
- ✧ Identify the support and resistance points before deciding whether to use the market or not.
- ✧ Once you identify the trend make sure the current candle forming is not in a range position
- ✧ Consider odd when there's an uptrend and even when there's a downtrend. This is not a standard condition, it's more of a niche just to give you an idea on what to trade. Depending with the digits dominant on the scale, you can execute an even trade on an uptrend and an odd trade on a downtrend. Like I said before the digits trade type is highly volatile.
- ✧ Once you have an idea of what to trade shift your attention to the scale and make sure the digits falling under the contract type you want to trade are dominant. Whether even/odd.
- ✧ Then switch to the five minute time frame to confirm your contract type. An easy way to do this is to observe which digits are appearing when the candle is pulling up and coming down also, if one contract [even/odd] is consistent on both movements it's safe to use it as your contract.

Entries

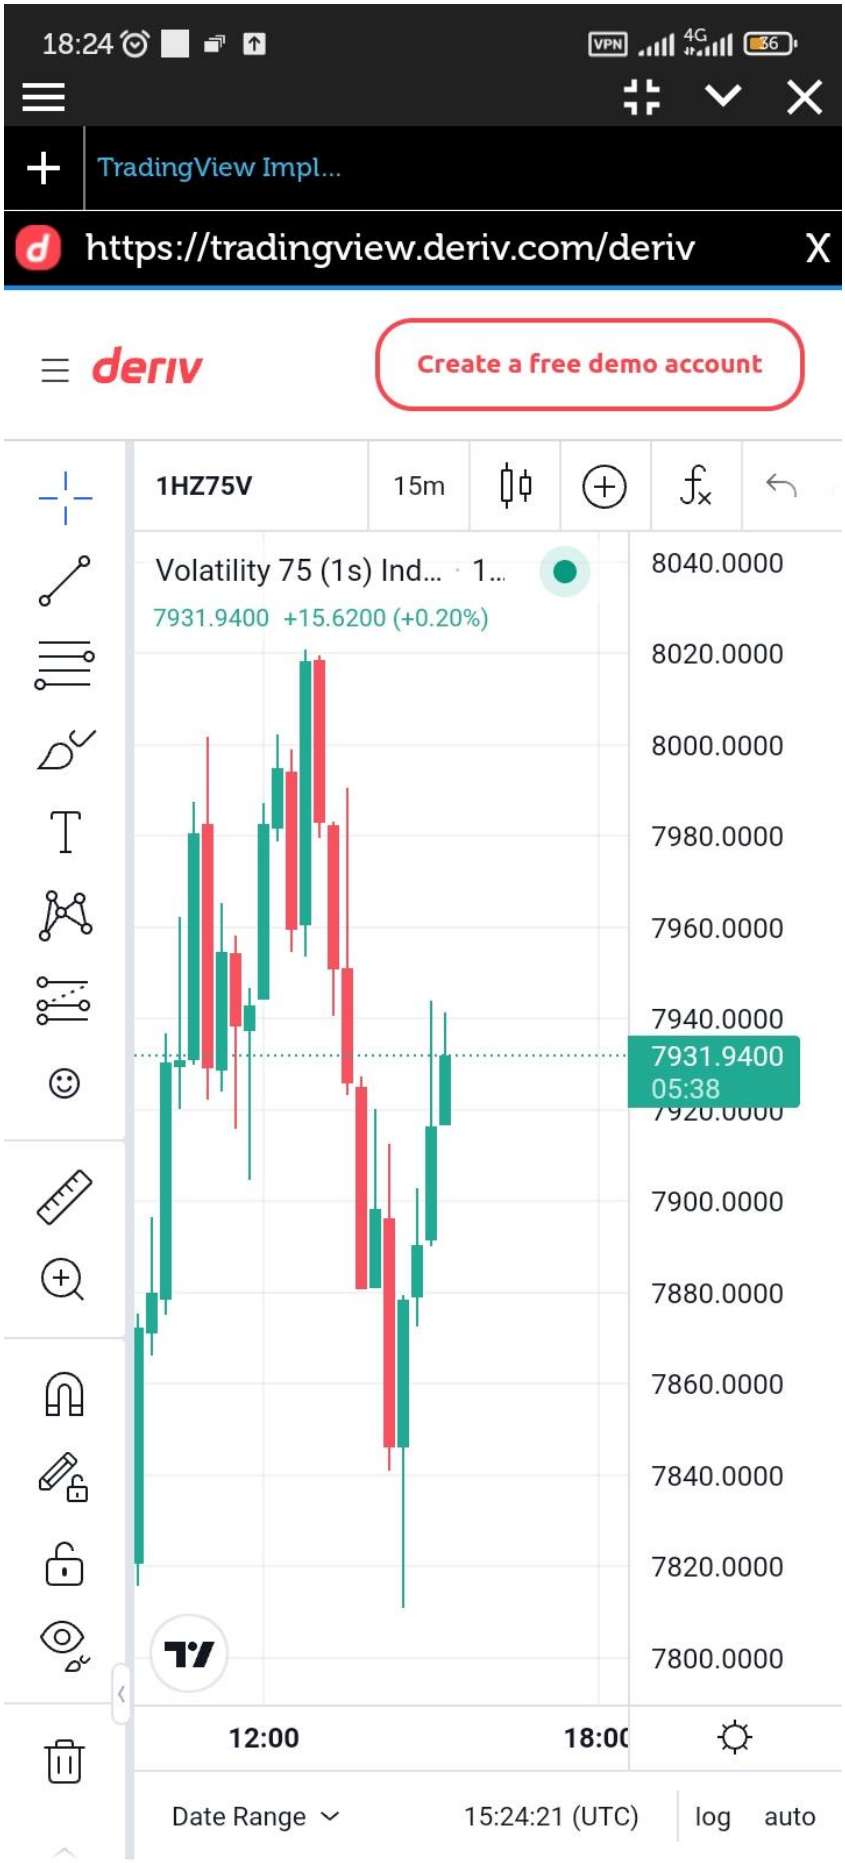

On entries you'll use the candle to enter your trade

- When trading odd wait for the candle to retest then pull up thrice then run. As long as the conditions on the scale are favourable for odd you can take on multiple runs with this type of entry. For risk management stop if you take on three consecutive losses or if you're on a win/loss pattern.
- When trading even wait for the candle to retest then pull down thrice then run. As long as the conditions on the scale are favourable for even you can take on multiple runs with this type of entry. For risk management stop if you take on three consecutive losses or if you're on a win/loss pattern.

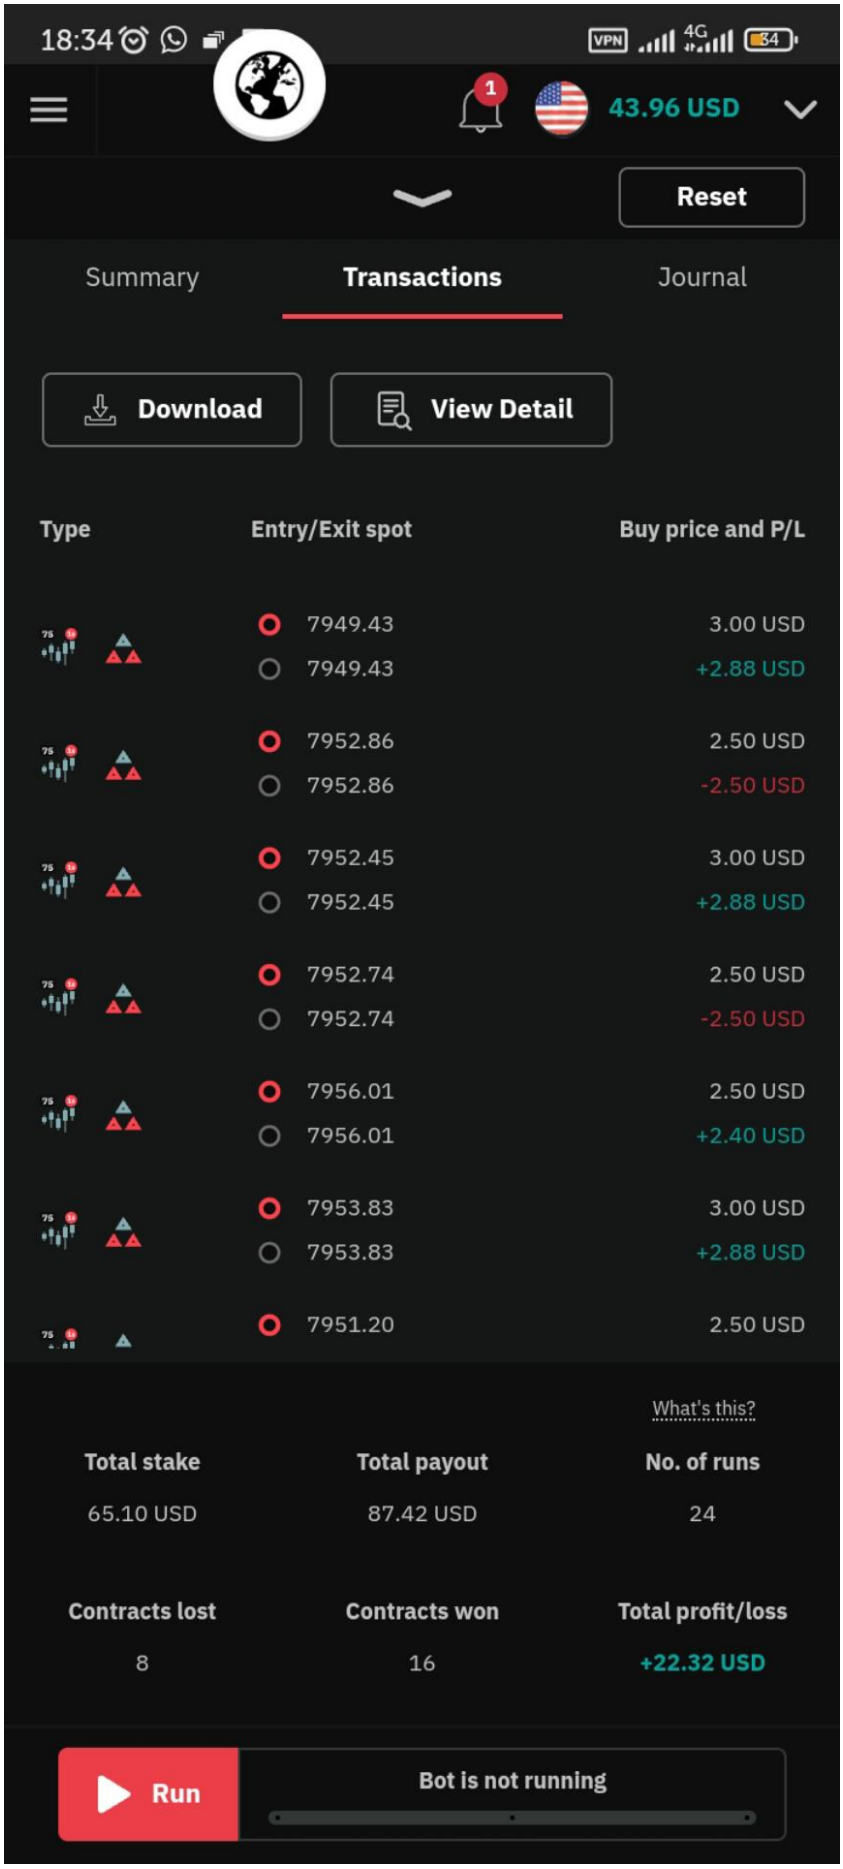

I have not been specific with which candle to use on either contract type, this is just so as to allow flexibility. My stand is you can trade even on either candle whether green/red and odd on any candle whether green/red.

MATCHES STRATEGY

This is the riskiest trade type out of the three digits trade types but it's also the one with the highest payout.

Conditions

- On prediction use a digit that is appearing in short intervals. On short intervals consider a maximum of three digits per appearance.

Entries

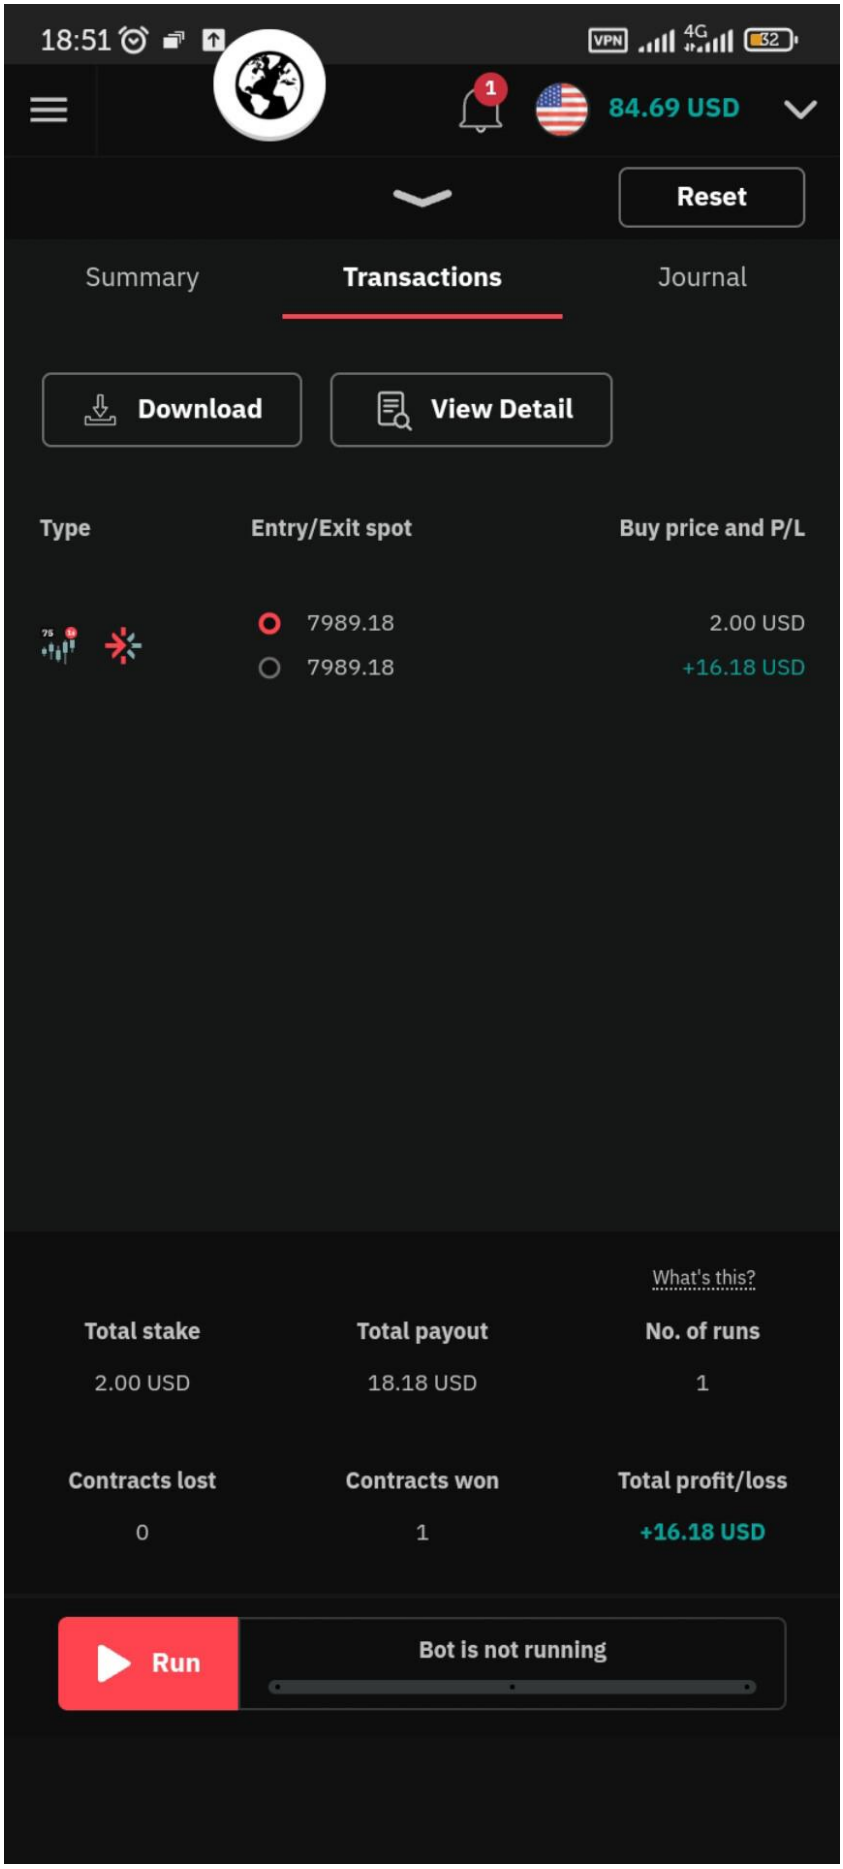

1. Use a 2:1 ratio once the digit confirms it's short interval appearance at least thrice.

2. The second entry method you can use on matches is sequence. Sequences are applicable after you've confirmed your prediction. You confirm your prediction when the digit appears at most with a 2:3 ratio. And confirms it's appearance with 3 pairs Then use your run point after confirmation that is, as the first digit after the decimal that pairs with your prediction when it appears as the second digit after the decimal within 3 ticks.

The second entry method is also reliable despite it sounding complicated, if you'll need further explanations seek me.

HIGH/LOW TICK STRATEGY

When trading high/low tick using prediction one on your bot it means you only take on profit when the first tick (the digit that appears on the first tick) is the highest/lowest out of the five depending on which contract type you're using.

Low tick Example

Profit= Tick 1 =4, Tick 2=7 Tick 3=9 Tick 4=7 Tick 5=6

Loss= Tick 1 =3, Tick 2= 4Tick 3=9 Tick 4=7 Tick 5=1

The digit's I've listed are the one's that appear as the second digit after the decimal on the scale. There's more to the wins and losses on this trade type but for further explanations seek me.

High tick Example

Profit= Tick 1 =4, Tick 2=3 Tick 3=0 Tick 4=3 Tick 5=2

Loss= Tick 1 =3, Tick 2= 4 Tick 3=9 Tick 4=7 Tick 5=1

Low tick conditions

Green momentum candle [with a maximum take profit of two wins].

Red RETESTING candle [maximum take profit of one win].

High tick conditions

Red momentum candle [with a maximum take profit of two wins].

Green RETESTING candle [maximum take profit of one win].

Entries

Low tick

Candle movements. movement slight retest (downward movement) then rebound to momentum (upward movement) and run

- Red RETESTING candle's movements

Slight momentum thrice (downward movement thrice) then rebound to a retest (upward movement) and run

1. **Scale.**

Binary Bet

On low tick you can use the digits appearing on the scale to enter your trade, especially when it's a retesting candle. On low tick use a combination of three consecutive under numbers to run, preferably digits ***0-3***

High tick

2. 1. **Candle movements**.

- Red momentum candle's movements

Slight retest (upward movement) then rebound to momentum (downward movement) and run

- Green RETESTING candle's movements

Slight momentum thrice (upward movement thrice) then rebound to a retest (downward movement) and run

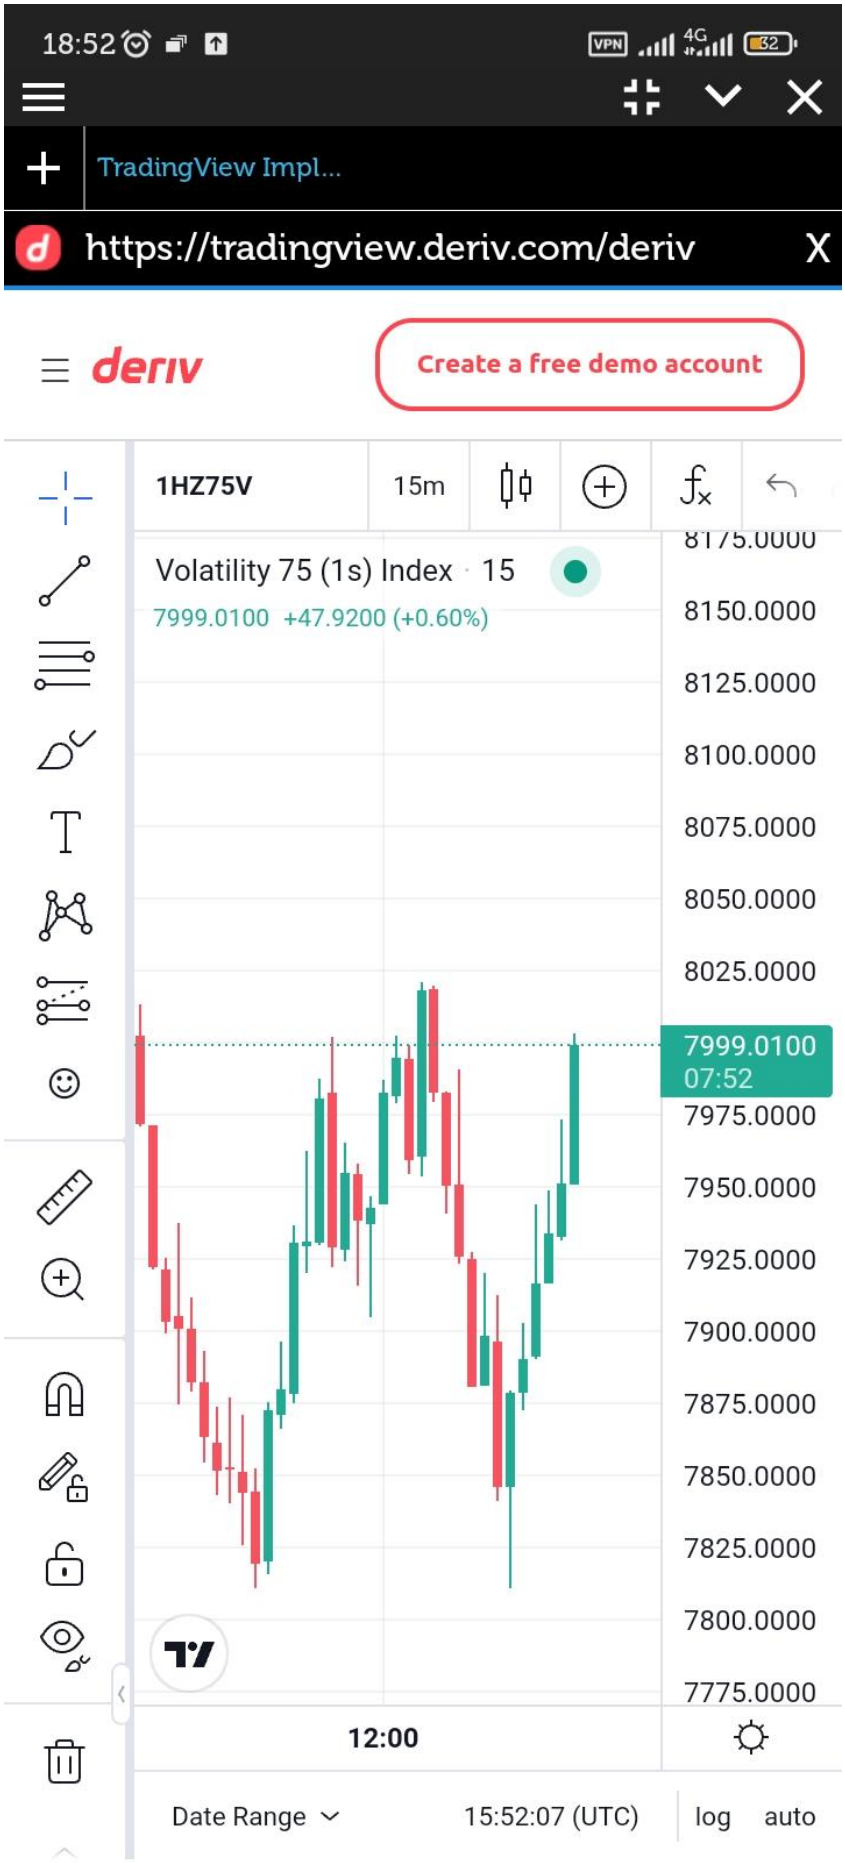

3. **Scale.**

On high tick you can use the digits appearing on the scale to enter your trade, especially when it's a retesting candle. On high tick use a combination of three consecutive over numbers to run, preferably digits 6-9.

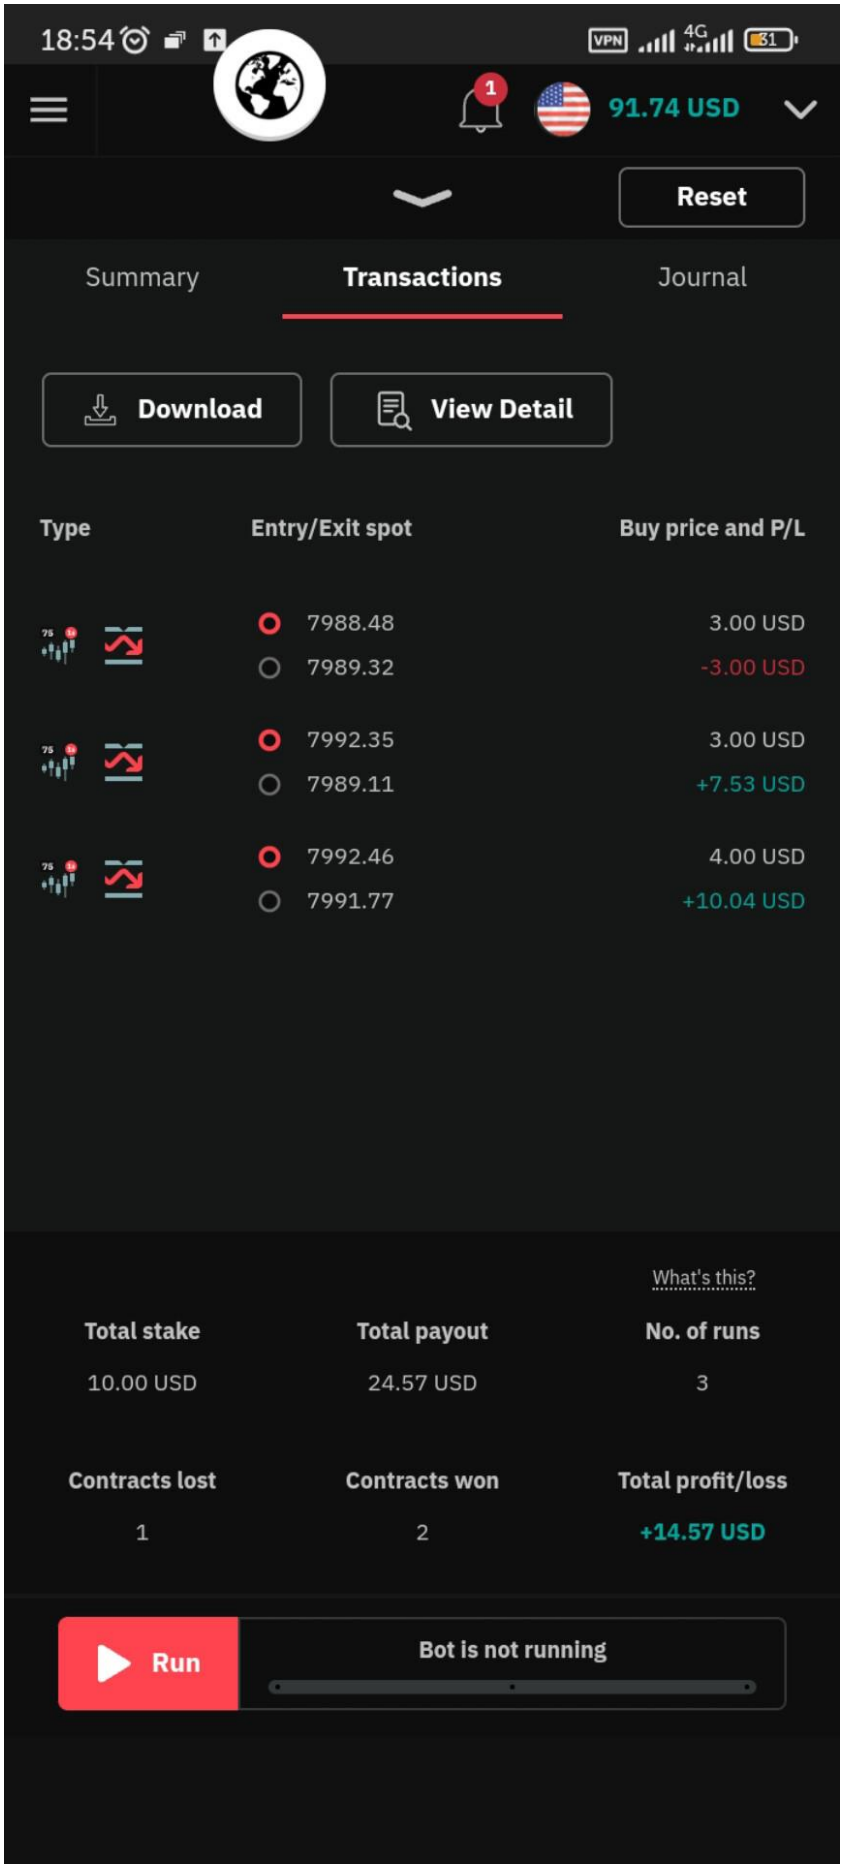

ON BOTH CONTRACT TYPES APPLY RISK MANAGEMENT. TAKE ONLY A MAXIMUM OF THREE RUNS, IF ALL ARE LOSSES TAKE A BREAK OR ANALYSE AGAIN AND LOOK FOR AN ENTRY.

RISE/FALL STRATEGY

This is the simplest trade type around, and generally the easiest strategy in this document.

Conditions

1. Strong trending market on the fifteen minute time frame.
2. Identify support and resistance points
3. Do rise on uptrend and fall on downtrend
4. Make your entry with slightly larger time frames like five minutes

Entries

Rise

Use a green momentum candle. Wait for a slight retest (downward movement) then when the candle starts going back on momentum (upward movement) run point.

Use a red retesting candle (though risky). Wait for the candle to be on a slight momentum thrice (downward movement thrice), when back on retest (upward movement) run point.

Fall

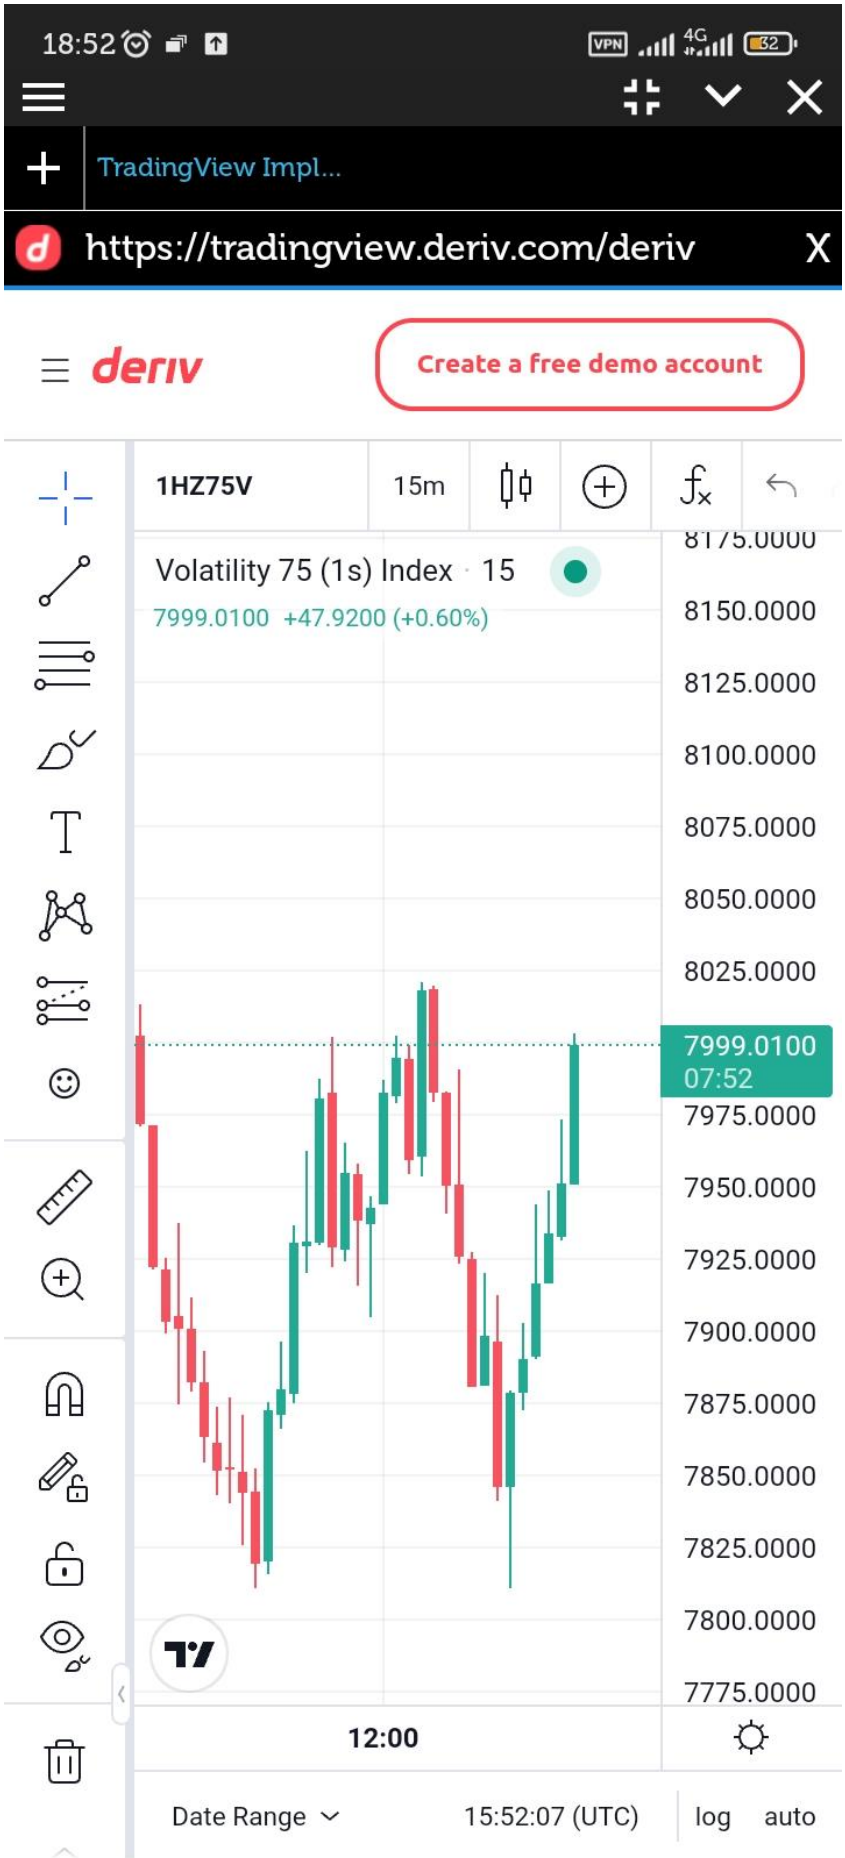

Use a red momentum candle. Wait for a slight retest (upward movement) then when the candle starts going back on momentum (downward movement) run point.

Use a green retesting candle (though risky). Wait for the candle to be on a slight momentum thrice (upward movement), when back on retest (downward movement) run point.

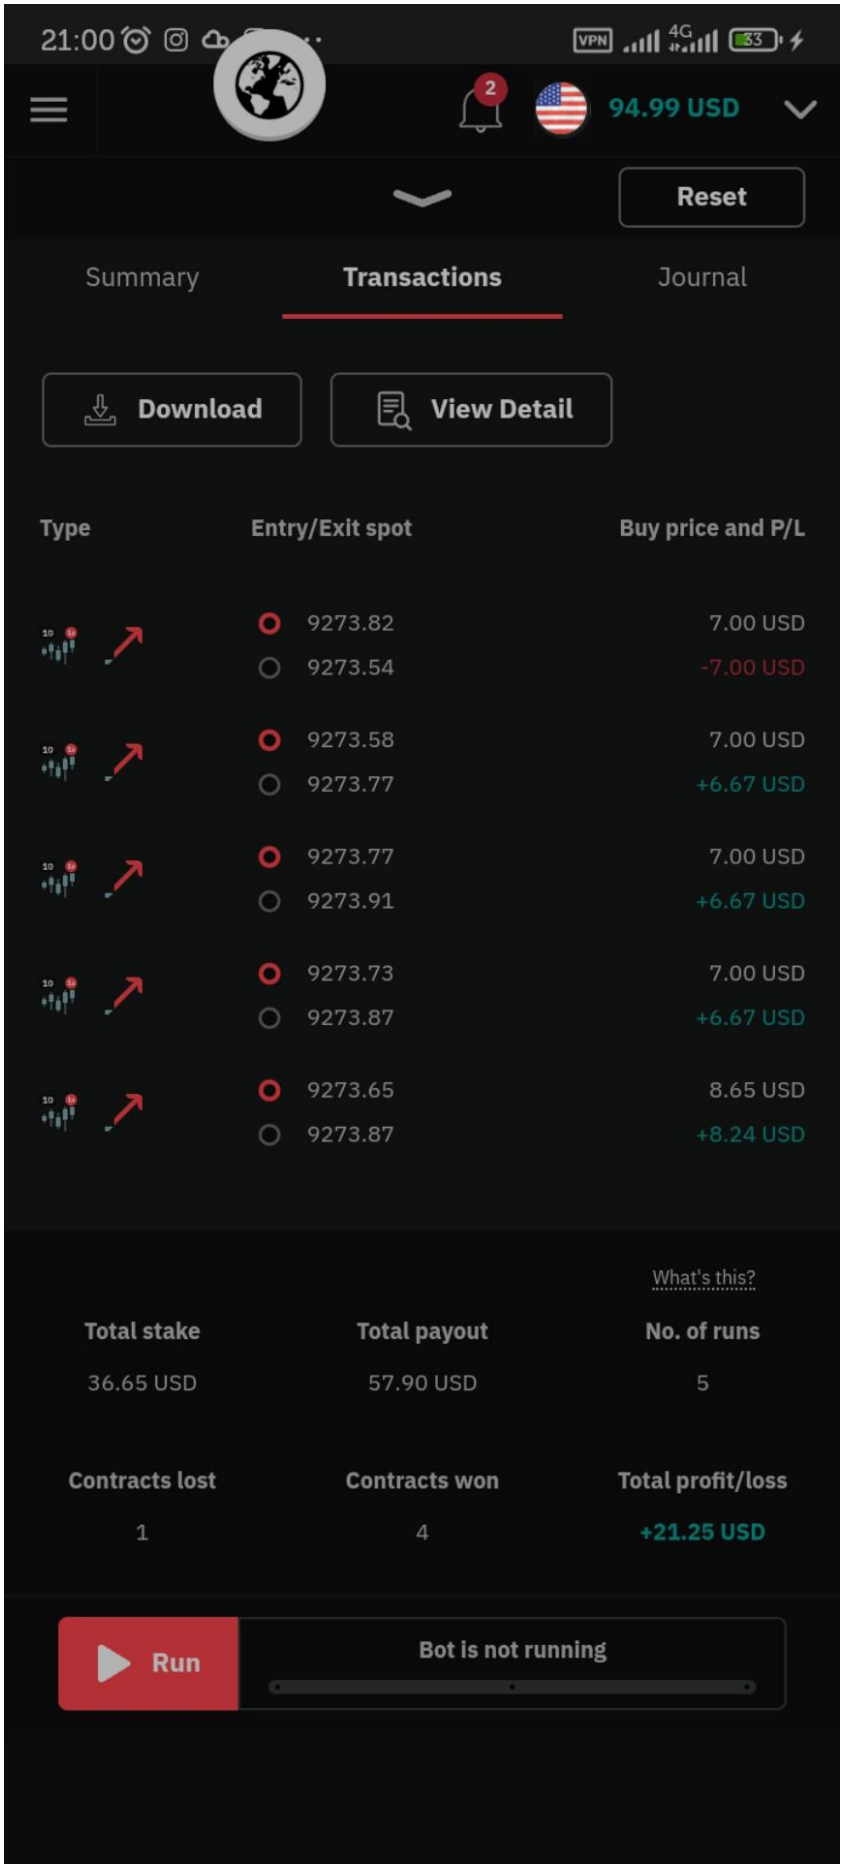

DO NOT USE EXTREME RETESTING CANDLES ON THIS TRADE TYPE [YOU CAN IDENTIFY THEM BY THE SMALL BODIES AND LONG WHICKS]

APPLY RISK MANAGEMENT ON ALL TRADES WHETHER ON CANDLES WITH MOMENTUM OR WITH RETESTING CANDLES. What I mean is that you should only risk about 15% of your stake to be on the safe side on each trade, especially if you're a beginner or you're not yet confident with your trades. I would advise against using a martingale on your bots when trading on a small account if you're starting up.

Martingale is a system of investing in which the dollar value of investments continually increases after losses, or at the position size increases with the portfolio size. The Martingale system was introduced by Paul Pierre Levy in the 18th century, bet you didn't know that. Well now you know. In simple terms a Martingale is a mechanism that increases your stake when you go on a loss. Let's say you're trading with a two dollar account with a stake of 0.35, every time you take on a loss the martingale increases and if you take on a lot of consecutive losses it's BOOM! Account successfully blown. So don't use a martingale when starting up.

I'm available if there are any inquiries or corrections you need to make, my contact number is **+254114126624.**

God Bless
